JOURNAL OF
Chemical Education

Owned and Published by the DIVISION OF CHEMICAL EDUCATION OF THE AMERICAN CHEMICAL SOCIETY

Volume 64, 1987

January–December

OFFICERS OF THE DIVISION OF CHEMICAL EDUCATION

S. KIRSCHNER, *Chair*
J. A. BELL, *Chair-elect*
W. HUTTON, *Past Chair*
J. W. MOORE, *Secretary/Councillor*
M. V. ORNA, *Treasurer*
R. PERKINS, *Member-at-Large*
P. J. SMITH, D. K. KOLB, A. KOZLOWSKI, *Councillors*

BOARD OF PUBLICATIONS

J. A. BELL
S. KIRSCHNER
D. K. KOLB
D. K. LAVALLEE
E. K. MELLON
J. W. MOORE
E. L. SCHULTZ
A. T. SCHWARTZ

EDITORIAL STAFF

J. J. LAGOWSKI, *Editor*
DEBORA ANN BITTAKER, *Assistant Editor*
MICKEY SARQUIS, *Secondary School Editor*

ASSISTANTS TO THE EDITOR

CARLENE R. CEASAR
BETTY L. DEES
JENNIFER L. DENHAM
LINDA DAVIS KYLE
GEORGE V. OLIVER

BUSINESS STAFF

J. V. DEROSE, *Publications Coordinator*
CENTCOM, INC., *Advertising Management*
J. STENZA, *Advertising Production Manager*

FEATURE EDITORS

ANNUAL INDEX
Journal of Chemical Education
Volume 64, 1987

Jan	1–94; A1–A28	July	559–646; A159–A176
Feb	95–192; A29–A60	Aug	647–732; A177–A196
Mar	193–288; A61–A94	Sept	733–820; A197–A222
Apr	289–384; A95–A120	Oct	821–904; A223–A252
May	385–472; A121–A138	Nov	905–988; A253–A290
June	473–558; A139–A158	Dec	989–1102; A291–A330

The annual index for Volume 64 of the Journal of Chemical Education is divided into several parts. Book Reviews are indexed separately both by author and title. Authors of articles are listed separately and are cross-referenced to other authors of the same article. The subject index includes titles listed by keywords, subject listings and listings of articles by feature column. The latter two are distinguished from the titles by printing the listing heading in italics. The following abbreviations are used throughout the index to indicate in which feature column an article appeared.

AA	*Applications and Analogies*	EQE	*Exam Question Exchange*	PROFILES	*Profiles in Chemistry*
AWARD	*Awards*	F&R	*Filtrates and Residues*	SAFETY	*Safety in the Chemical Laboratory*
BR	*Bench Remarks*	GB	*Going Beyond, Going Further*	ST	*Safety Tips*
CB	*Concepts in Biochemistry*	GOALS	*Goals*	STAMP	*Chemistry on Stamps*
CC	*Chem Ed Compacts*	IC	*Inventory Control*	SYMP	*Symposium*
CE	*Cooperative Education*	IMP	*Impact*	TD	*Tested Demonstrations*
CHEM I	*Chem I Supplement*	IND	*Real World of Industrial Chemistry*	TF	*Textbook Forum*
CHS	*Contemporary History Series*	INS	*Insights*	TICI	*Topics in Chemical Instrumentation*
CK	*Chemistry for Kids*	LTE	*Letter to the Editor*	TS	*Thumbnail Sketches*
CP	*Chemical Principles Revisited*	OP	*Overhead Projector Demonstrations*	VIEW	*View from My Classroom*
CS	*Computer Series*	PO	*Provocative Opinion*	2YC	*2YC$_3$ Viewpoint*

Author Index

A

Abdala, Miguel H.—*see* **Hiegel, Gene A.**
Ackerson, Rex D. Demonstration of condensation–vaporization (TD). 70
Adkins, M. Wayne—*see* **Brunce, Richard A.**
—*see* **Choney, J. H.**
—*see* **Lane, R. K.**
Aguila G., Eugenia—*see* **Bartet P., Daniel.**
Ahmed, Fakhruddin. A good example of the Franck–Condon principle. 427
Akers, Hugh A. Metabolic questions (EQE). 159
Alexander, John J., *editor*. Exam question exchange. 159, 320, 401, 532, 677, 1015
Allan, Michael. Electron spectroscopic methods in teaching. 418
Allen, Bill. Using chemistry's crystal ball (VIEW). 227
Alonso, C., and **Ocon P.** Passivation of copper in acid medium. 459
Altman, Sidney—*see* **McCorkle, George M.**
Alzabet, H. R., and **Barbero, J. A.** A controller of level of liquids. 727
—A simple, low-cost programmer for a temperature controller (IC). 380
Aminabhavi, Tejraj M.—*see* **Balundgi, Ramachandra H.**
Anacker, E. W., **Anacker, Steven E.**, and **Swartz, William J.** Some comments on partial derivatives in thermodynamics. 670
Anacker, Steven E.—*see* **Anacker, E. W.**
Anderson, Ben—*see* **McGuiggan, Patricia.**
Anderson, Martin M. Two working models for the S_N2 mechanism. 1023
Anzelmo, John A., and **Lindsay, James R.** X-ray fluorescence spectrometric analysis of geologic materials (TICI).
Part 1. Principles and instrumentation. A181
Part 2. Applications. A200
Aquirre-Ode, Fernando. A general approach for teaching hydrolysis of salts. 957
Arnau, F., Cabot, P. Ll., Cortes, M., and **Costa, J. M.** Faradaic impedance diagrams: A computer electrochemical experiment (CS). 792
Aroca, Patricia, Jr., and **Aroca, Ricardo.** Chemical oscillations: A microcomputer controlled experiment (CS). 1017
Aroca, Ricardo—*see* **Aroca, Patricia, Jr.**
Augustine, Frederick B. Musical molecular weights revisited (TD). 1053.

B

Bagal, Ujjvala A.—*see* **Seybold, Paul G.**
Baird, Donald M., and **Szamosi, Janos.** Establishment of a regional high school instrumentation center at Western Illinois University. 1051
Baker, Claire A.—*see* **Frank, David V.**
Baker, Roger, and **Thompson, James C.** A simple demonstration of high T_c superconductive powder. 853
Baldwin, W. George, and **Burchill, C. Eugene.** Correct equilibrium constants for water (LTE). 1067
Ball, David W. Another auto analogy: Rate-determining steps (AA). 486
—Elemental etymology: What's in a name (LTE)? 472
Balundgi, Ramachandra H., and **Aminabhavi, Tejraj M.** Deriving $S = k \ln \Omega$ (LTE). 730
Banks, Allan—*see* **Moore, C. E.**
Banks, Alton J. Dozen, gross, nerds, moles, and sons (INS). 956
Barbero, J. A.—*see* **Alzabet, H. R.**
Barnhard, Ralph. The next time . . . I hope . . . (LTE). 558
Bartet P., Daniel, and **Aguila G., Eugenia.** Teaching the concepts on metallurgy through the use of postage stamps (STAMP). 526
Basel, Chris L. Analytical methods development. 528
Battino, Rubin. Permission (LTE). 903
—*see* **Botch, Beatrice.**
Batt, Russell H. The computer bulletin board: A new feature column. 1017
Beard, Donald P.—*see* **Hiegel, Gene A.**
Bearman, Richard J., and **Russell, Richard A.** A generalist chemistry major for liberal arts and science degrees. 703
Beatty, James W., and **Colin, Todd B.** An inexpensive linear thermistor thermometer for cryoscopic and calorimeter measurements and lecture demonstrations (CS). 500
Begtrup, Mikael. Versatile and inexpensive screw-cap vessels for medium pressure reactions and processes run under an inert atmosphere. 974.
Belloni, Lanfranco—*see* **Kauffman, George B.**
Bendall, Victor I. A programming utility for animation (CS). 236
Benesi, A. J.—*see* **Taagepera, M.**
Bentley, Ronald, and **Popp, Janet L.** Configurations of glucose and other aldoses: New twists and reflections an old problems. 15
Bent, Brian E.—*see* **Bent, Henry A.**
Bent, Henry A. Carbon dioxide: Its principal properties displayed and discussed (BR). 167
—Origin of the term "quantum" (LTE). 383
—Playing with a match: Free fall and fire. An introduction to physical thought (BR). 1047
—Should we teach the mole (LTE)? 192
—and **Bent, Brian E.** Descriptive chemistry (PO). 249

Bering, Charles L. A good idea leads to a better buffer (CB). 803
Bernal, Ivan, and **Kauffman, George B.** The spontaneous resolution of *cis*-bis(ethylenediamine)dinitrocobalt(III) salts: Alfred Werner's overlooked opportunity. 604
Berry, Keith O.—*see* **Mehlhaff, L. C.**
Berthelot, Jacques—*see* **Desbene–Monvernay, Annie.**
Bhat, Krishna L., and **Joullie, Madeleine M.** Cyclopeptide alkaloids. 21
Bill, H.—*see* **Hagemann, H.**
Birdwhistell, Ralph K., *editor.* Textbook forum. 164, 208, 416, 531, 676, 777, 885, 918, 1009
Bishop, Carl B.—*see* **Bishop, Muriel B.**
Bishop, Muriel B., and **Bishop, Carl B.** Photosynthesis and carbon dioxide fixation. 302
Bivens, Richard L.—*see* **Rodgers, Glen E.**
Blankenship, Craig. A nuts and bolts approach to explain limiting reagents. 134
Blanchette, Paul P. The binary liquid–solid phase diagram of naphthalene-*p*-dichlorobenzene: An physical chemistry laboratory experiment. 267
Blanck, Harvey F. A Commodore microcomputer/Mettler 440 balance interface (CS). 240
Blinder, S. M.—*see* **Li, Wai-Kee.**
Blinstrub, David S.—*see* **Norman, Jack C.**
Bobbio, Florinda O., Bobbio, Paulo A., and **Souza, Sandra C. de.** Separation and identification of cinnamic acids by TLC. 182
Bobbio, Paulo A.—*see* **Bobbio, Florinda O.**
Bodner, George M. The role of algorithms in teaching problem solving (SYMP). 513
Bogner, Donna, *editor.* Insights. 155, 247, 408, 611, 698, 956
Bonneau, Marcia C. Enthalpy and hot wheels: An analogy (AA). 486
Borer, Londa L. An "indicating" experience for students (CK). 446
Boschmann, Erwin. Physical and chemical properties (OP). 891
Botch, Beatrice, and **Battino, Rubin.** A safe cell for viewing the critical point of CO_2. 347
—*see* **McGuiggan, Patricia.**
Boucher, Michele M.—*see* **Soltzberg, Leonard J.**
Boulil, B., Deumie, M., and **Henri–Rousseau, O.** Where is the link between quantum mechanical and thermodynamical adiabaticity? 311
—*see* **Deumie, M.**
Bourque, Donald R., and **Carlson, Gaylen R.** Hands-on versus computer simulation methods in chemsitry. 232
Brabson, G. Dana—*see* **Jackson, Lance E.**
Bradbury, Michael W.—*see* **Chalmers, John H., Jr.**
Brand, David J., and **Fisher, Jed.** Molecular structure and chirality. 1035
Braun, B. M.—*see* **Hertz, H. G.**
Bravo, Ruiess Van Fossen. Methyl isocyanate in student laboratories (LTE). 820
Breneman, G. L. Crystallographic symmetry point group notation flow chart. 216
—X-ray structure refinement and electron density map: A computer programming experiment (CS). 790
—and **Parker, O. J.** Computer programming in general chemistry (CS). 584
Bretherick, Leslie. Stable organic oxidants: Paradox or possibility (SAFETY). A43
Bricker, Clark E. A two-dimensional working model of the neon electron configuration. 133
Brillas, Enrique, Garrido, Jose A., Rodriquez, Rosa M., and **Domenech, Javier.** A cyclic voltammetry experiment using a mercury electrode. 189
Brina, Rossella, and **De Battisti, Achille.** Determination of the specific surface area of solids by means of adsorption data. 175
Broniec, Rick. Student-designed labs (GB). 961
Brook, Michael A. The nomenclature of relative stereochemistry: Choosing between likes and preferences. 218
Brooks, David W. What next (PO)? 53
Brown, Melody, Sutherland, Mary, and **Leharne, Stephen.** The effect of pH and chloride ion concentration on the mobilities of various cations in soil. 448
Brown, Ronald A.—*see* **Weiss, Ulrich.**
Bruno, Thomas J. An indicating rupture disk for gas cylinders. 557
—Laboratory applications of the vortex tube. 987
Bryan, William P. Sorption hysteresis and the laws of thermodynamics. 209
Buchar, Constance S.—*see* **Kelter, Paul B.**
Buckner, Mark B.—*see* **Marchand, Alan P.**
Buglass, Alan J., and **Waterhouse, John S.** Polymer-supported oxidation reactions: Two contrasting experiments for the undergraduate laboratory. 371
Buncel, Erwin, and **Wilson, Harold.** The reactivity selectivity principle: Should it ever be used? 475
Bunce, Nigel J. Introduction to the interpretation of electron spin resonance spectra of organic radicals. 907
Bunce, Richard A., and **Adkins, M. Wayne.** A modified adapter for liquid transfer. 728
Bunting, John W. Assigning absolute configuration (LTE). 731
Burchill, C. Eugene—*see* **Baldwin, W. George.**
Burfield, David R. Polymer glass transition temperatures. 875
—and **Hefter, Glenn.** Oven drying of volumetric glassware. 1054
Burke, John M.—*see* **Kaneko, Kotaro J.**
Burke, S. Vincent—*see* **Hiegel, Gene A.**
Burrows, Hugh D., and **Cardoso, A. Correia.** Radiationless relaxation and red wine. 995
Butcher, Philip G., Mortimer, Michael, and **Whatley, Barrie G.** A three-dimensional computer animation of potential energy surface (CS). 495
Butler, J. Keith. Carbonated beverages and frozen stopcocks. 896
Bye, Ragnar. A simple extraction procedure for the determination of lead in gasoline by atomic absorption spectrometry. 188

C

Cabot, P. Ll.—*see* **Arnau, F.**
Calvin, Melvin. High-energy fuels and materials from plants. 335
Cane, Dawn M.—*see* **Soltzberg, Leonard J.**
Cardoso, A. Correia—*see* **Burrows, Hugh D.**
Cardulla, Frank. Solving chemistry problems without utilizing the factor-label approach. 519
Carlson, Gaylen R.—*see* **Bourque, Donald R.**
Carraher, Charles E., Jr. Thermodynamics and the bounce. 43
—and **Seymour, Raymond B.** Polymer properties and testing—definitions. 866
—and **Siegmann, Deborah W.** Genetic engineering: Or how to build a better (at least different) mousetrap. 854
—**Hess, George,** and **Sperling, L. H.** Polymer nomenclature—or, what's in a name? 36
—*see* **Rodriguez, F.**
Carroll, Felix A., Strouse, Geoffrey F., and **Hain, Jon M.** A visual manifestation of the Norrish Type I reaction: The cyclohexanone sunburn dosimeter. 84
Carswell, Suzanne—*see* **Marshall, David B.**
Carter, Eugenia G.—*see* **Carter, Kenneth Nolon.**
Carter, Kenneth Nolon, and **Carter, Eugenia G.** "Congratulations, you have just destroyed yourself": or "How to fail in chemistry without really trying" (PO). 310
Carter, Stephen J. An apparatus permitting constant addition of liquid ammonia in preparative scale ammoniolysis reactions. 365
Casabo, Jaume—*see* **Teixidor, Francesc.**
Castillo, Carlos S. An alternative use of titrimetric data (LTE). 288
Castrillon, Jose. Thioxanthone sulfone radical anion: A relatively stable ketyl (TD). 352
Cavaleiro, Jose A. S. "Solvent" effects in ^1H NMR spectroscopy: A simple undergraduate experiment. 549
Cavanaugh, Margaret A.—*see* **Roscher, Nina Matheny.**
Chalmers, John H., Jr., Bradbury, Michael W., and **Fabricant, Jill D.** A multicolored luminol-based chemiluminescence demonstration (TD). 969
Chandler, W. David, Lee, Eric J., and **Lee, Donald G.** Computer-assisted analysis of reaction rate data (CS). 878
Chang, Kuo-In—*see* **Flessel, Peter.**
Chang, On-Kok. Estimating the equilibrium voltage of an ion-selective electrode. 91
Chan, W. H. Plasticizers in PVC: A combined IR and GC approach. 897
Charola, A. Elena. Acid rain effects on stone monuments (CHEM I). 436
Choney, J. H., Adkins, M. W., and **Eisenbraun, E. J.** A continuous ether/water extractor. 970
Ciereszko, Leon S. Rock candy in a cellophane bag: A demonstration of pervaporation. 804
Clingman, Kelly A., and **Hajdu, Joseph.** Reactions of lipolytic enzymes: An undergraduate biochemistry experiment. 358
Clough, S. B. Stretched elastomers: A case of decreasing length upon heating. 42
Coe, Douglas A. Numerical solutions of kinetic equations on a spreadsheet (CS). 496
—Using a spreadsheet to calculate the fugacity of a van der Waals gas (CS). 137
Colgate, Samuel O., Williams, Kathryn R., Reed, Kyle, and **Hart, Carol Ann.** C_P/C_V ratios by the sound velocity method using a spherical resonator: A modification of a common physical chemistry laboratory experiment. 553
—*see* **Williams, Kathryn R.**
Colin, Todd B.—*see* **Beatty, James W.**
Conklin, Alfred R. Analysis of aspartame and its hydrolysis products by thin-layer chromatography. 1065

Apparatus
Adapter for liquid transfer. 728
Add-on computing integrator/recorder for improved NMR integration. 468
Apparatus for constant NH_3 addition. 365

Apparatus for measuring dynamic surface tension. 378
Apparatus for sampling degassing and sealing. 282
Charles's Law/vapor pressure apparatus (TD). 969
Commercially available electronic device for conductivity experiments (IC). 281
Commodore microcomputer/Mettler 440 balance interface (CS). 240
Computer interfacing to laboratory instruments (TICI). A100
Conductivity of solutions apparatus. 550
Continuous ether/water extractor. 970
Controller of level of liquids. 727
Device for producing, measuring, and moving gas (IC). 152
Device for the preparation of feed gas-air mixtures of very low gas concentrations. 375
Device to demonstrate the principles of photometry and three experiments for its use. 630
Easily made electronic device for conductivity experiments (IC). 628
Electroantennography cell for testing the activity of pheromones. 356
Electrode storage. 556
Estiating the equilibrium voltage of an ion-selective electrode. 91
Gel electrophoresis in a covered butter dish. 279
Indicating rupture disk for gas cylinders. 557
Inexpensive glass lathe. 967
Infrared salt plate cleaning device. 261
Laboratory applications of the vortex tube. 987
Laboratory HVAC systems: A troika (SAFETY). A314
Laboratory steam distillation using electrically generated superheated steam. 373
Linear thermistor thermometer for cryoscopic and calorimeter measurements and lecture demonstrations (CS). 500
Low-frequency IR windows using Tupperware seals and polyethylene coffee can lids. 975
Method of rapidly preparing sealed ampules containing air-sensitive materials. 278
Microcell techniques for NMR analysis. 812
Nephelo-turbidity meter. 729
Oven drying of volumetric glassware. 1054
Plastic spot plate for overhead demonstrations (OP). 964
Programmer for a temperature controller (IC). 380
Rendering stoppers almost uncontaminatable. 724
Safe cell for viewing the critical point of CO_2. 347
Screw-cap vessels for medium pressure reactions and processes run under an inert atmosphere. 974

Apple II, Audo frequency measurements for heat capacity ratios using (CS). **Robert V. St. Louis.** 788

Applications and analogies, edited by **Ronald DeLorenzo**
An analogy for soluble and insoluble mixtures: Sand and magnetic iron fillings. **Ira Batra Garde.** 154
Another auto analogy: Rate-determining steps. **David W. Ball.** 486
Election results and reactions yields. **Romeu C. Rocha–Filho.** 248
Enthalpy and "Hot Wheels": An analogy. **Marcia C. Bonneau.** 486
The collision theory and an American tradition. **Lee A. Krug.** 1000
Aqueous problem with an interesting solution (INS). **Nicholas C. Thomas.** 611
Arsenic–arsenic double bond revisited. **Alfred S. Levinson.** 407
Arsenic(III) sulfide clock reaction (TD). **Kenneth W. Watkins.** 255
Aspartame and its hydrolysis products by thin-layer chromatography, Analysis of. **Alfred R. Conklin.** 1065
Aspartame, A convenient synthesis of. **Gunnar Lindeberg.** 1062
Assigning absolute configuration (LTE). **John W. Bunting.** 731
Assigning absolute configuration, Another view (LTE). **Gordon F. Hambly.** 732
Assigning absolute configurations, One more view on (LTE). **David Todd.** 732
Atomic absorption spectrometry, Extraction procedure for the determination of lead in gasoline by. **Ragnar Bye.** 188
Atomic and molecular spectra using Polaroid films: A physical chemistry experiment. **Manit Rappon** and **John M. Greer.** 453
Attenuation of gamma rays in binary compounds: A versatile illustration of Beer's law. **E. W. Kleppinger** and **S. W. Yates.** 172
Audio frequency measurements for heat capacity ratios using Apple II (CS). **Robert V. St. Louis.** 788
Audits of hazardous waste operations in laboratories, Self (SAFETY). **Kenneth E. Fischer.** A207
Aufbau rules, Sociology and Pauli's. **Scott T. Hill.** 27
Auto analogy: Rate-determining steps, Another (AA). **David W. Ball.** 486
Autocatalytic activation of trypsinogen by trypsin. **Salvatore F. Russo** and **Erin T. Wahl.** 83
Autocatalytic reactions, The kinetic rate law for. **Fernando Mata–Perez** and **Joaquin F. Perez–Benito.** 925

B

Baker's yeast reductions of ethylacetoacetate: An NMR experiment, Chiral shift reagent analysis of enantioselectivity in. **K. B. Lipkowitz** and **J. L. Mooney.** 985
Balance chemical equations, A new method to (INS). **Arcesio Garcia.** 247
Balance interface, Commodore microcomputer/Mettler 440 (CS). **Harvey F. Blanck.** 240
Baxter, Jr. (1909–1987), In memoriam: Jon F. **George B. Kauffman.** 752
Beer's law, Attenuation of gamma rays in binary compounds: A versatile illustration of. **E. W. Kleppinger** and **S. W. Yates.** 172

Bench remarks.
Carbon dioxide: Its principal properties displayed and discussed. **Henry A. Bent.** 167
Playing with a match: Free fall and fire. An introduction to physical thought. **Henry A. Bent.** 1047
Benedict test, A modified Fehling test and a modified corrected. **William D. Hill, Jr.** 984
Biennial conference on chemical education, Ninth, Report of the. 96
Binary compounds: A versatile illustration of Beer's law, Attenuation of gamma rays in. **E. W. Kleppinger** and **S. W. Yates.** 172
Binary oxides, An acidity scale for. **Derek W. Smith.** 480
Binary solutions: An integrated physical chemistry experiment, Properties of nonideal. **David B. Marshall, J. L. McHale, Suzanne Carswell,** and **David Erne.** 369
Binding constants, Spectroscopic determination of protein–ligand. **Aydin Orstan** and **John F. Wojcik.** 814
Biochemistry, Why teach (GOALS)? **Gil Downs.** 339

Biochemistry
Analysis of aspartame by TLC. 1065
Autocatalytic activation of trypsinogen by trypsin. 83
Butter and margarine: Their chemistry, their conflict (CHEM I). 596
Chemical modification of catalytically essential amino acid residues in enzymes. 77
Cyclopeptide alkaloids. 21
DNA model for every student. 806
Dorothy Wrinch and the structure of proteins (LTE). 1069
Electroantennography cell for testing the activity of pheromones. 356
Electrophoretic analysis of DNA restriction fragments. 274
Ethnobotany: The chemist's source for the identification of useful natural products. 328
Gel electrophoresis in a covered butter dish. 279
Genetic engineering. 854
Good idea leads to a better buffer (CB). 803
Hemoglobinometry experiment that uses transition metalchemistry (F&R). 354
High-energy fuels and materials from plants. 335
Indigo plant as a teaching material. 332
Industrial application of recombinant DNA technology (CHEM I). 337
Metabolic questions (EQE). 159
Metabolism of xenobiotic chemicals. 396
Molecular structure and chirality. 1035
Photosynthesis and carbon dioxide fixation. 302
Protein structure prediction in color (CS). 582
Pyrrolizidine alkaloids: Testing for toxic constituents of comfrey. 1027
Reactions of lipolytic enzymes. 358
Reversible oxygenation of oxygen transport proteins. 441
RNA's as catalysts: A new class of enzymes (CB). 221
Spectroscopic determination of protein–ligand binding constants. 814
Supercoiled DNA: Biological significace (CB). 294
Synthesis of an amino acid derivative and spectroscopic monitoring of dipeptide formation. 966
Synthesis of aspartame. 1062
When oil and water do not mix (OP). 1022

Bipyridinetetracarbonylmolybdenum(0): An experiment in organometallic photochemistry, Preparation and reaction of 2,2'-. **David M. Manuta** and **Alistair J. Lees.** 637
Bis(trimethylsilyl) amides: A multinuclear NMR project, The structure of. **Marjorie S. Samples, Claude H. Yoder,** and **Charles D. Schaeffer, Jr.** 177
Boltzmann distribution: An experiment in spectroscopy and theoretical spectrum simulation, Experimental verification of a. **Mark Sulkes** and **Jean E. Osburn.** 720
Bond: A tragedy of a scientist, Reception of Kasimir Fajan's quanticule theory of the chemical. **Jozef Hurwic.** 122
Bond, The chemical (CP). **Roger L. DeKock.** 934
Boolean, and proximity operators, Searching *Chemical Abstracts Online* in undergraudate chemistry: Part I. CA file. **Miroslav Krumpolc, Diana Trimakas,** and **Connie Miller.** 55
Borodin: Full-time chemist, part-time musician, Alexander (PROFILES). **Alvan D. White.** 326
Bounce, Thermodynamics and the. **Charles E. Carraher, Jr.** 43
Brasted, In memoriam: Robert C. 301
Bromcresol green, Kinetics of oxidation of. **Miles Pickering** and **David Heiler.** 81
Bromination of styrene by Br^{3-}: A laboratory experiment, Voltammetric monitoring of Br^- and Br^{3-} concentrations during the. **Annie Desbene–Monvernay, Jacques Berthelot,** and **Paul–Louis Desbene.** 86
Bromine for qualitative analysis, Safe, convenient method of generating. **Suzanne W. Slayden, Thuy H. Do, Kimberly Y. Smiley,** and **Donna J. Nelson.** 368
Buffer, A good idea leads to a better (CB). **Charles L. Bering.** 803
Buffer capacity: A undergraduate laboratory experiment. **Steven O. Russo** and **George I. H. Hanania.** 817

Buret readings, Statistical evaluation of class data for two. **Adon A. Gordus.** 376
Butter and margarine: Their chemistry, their conflict (CHEM I). **William R. Oliver** and **Diana Combs McGill.** 596
Butter dish, Gel electrophoresis in a covered. **T. R. Hopkins** and **K. Sreekrishna.** 279

C

Calcium carbide, A versatile demonstration with (TD). **Ariel A. Fenster, David N. Harpp,** and **Joseph A. Schwarcz.** 444
Calculations of the characteristic polynomial and π-energy levels of molecules using chemical graph theory, Facile. **Jerry Ray Dias.** 213
Calorimeter measurements and lecture demonstrations, An inexpensive linear thermistor thermometer for cryoscopic and (CS). **James W. Beatty** and **Todd B. Colin.** 500
Carbon dioxide fixation, Photosynthesis and. **Muriel B. Bishop** and **Carl B. Bishop.** 302
Carbon dioxide: Its principal properties displayed and discussed (BR). **Henry A. Bent.** 167
Carbon tetrachloride from two common experiments, Elimination of. **Linda Munchausen** and **Archie Moore.** 544
Carbon-13 NMR chemical shifts: The BS method, A very brief, rapid, simple, and unified method for estimating. **Ben Shoulders** and **Steven C. Welch.** 915
Carboxylic acid/alcohol relative acidity argument, On a common graphical flaw in the (TF). **Ronald W. McClard.** 416
Carcinogen, Suspected (LTE). **Richard Hendry.** 191
Carcinogens in air, Ames testing for mutagens and. **Peter Flessel, Yi Y. Wang, Kuo-In Chang,** and **Jerome J. Wesolowski.** 391
Catalysis: Synthesis of phenylethoxycarbene tungsten pentacarbonyl and polymerization of norbornene and phenylacetylene, An undergraduate experiment in homogeneous. **Dider Villemin.** 183
Catalysts: A new class of enzymes, RNA's as (CB). **George M. McCorkle** and **Sidney Altman.** 221
Catalysts: Regioselectivity as a function of conversion, Hydroformylation of 1-hexene utilizing homogeneous rhodium. **Brian E. Hanson** and **Mark E. Davis.** 928
Catalytically essential amino acid residues in enzymes, Chemical modification of. **Manuel G. Roig.** 77
Cations in soil, Effect of pH and chloride ion concentration on the mobilities of various. **Melody Brown, Mary Sutherland,** and **Stephen Leharne.** 448
Caulking and sealant materials, Polymers in. **Van R. Foster.** 867
Cell for testing the activity of pheromones, Selective electroantennography. **Roberto Rozas** and **Dagor Perez.** 356
Cell for viewing the critical point of CO_2, Safe. **Beatrice Botch** and **Rubin Battino.** 347
Characterizing a tetrahedral intermediate in an acyl transfer reaction: An undergraduate ^1H NMR demonstration. **Henry S. Rzepa, Ana M. Lobo, M. Matilde Marques,** and **Sundaresan Prabhakar.** 725
Charles's law: Students develop their own procedure (F&R). **Diane Rose.** 712
Charles's law/vapor pressure apparatus (TD). **Phillip K. Hall.** 969

Chem ed compacts, edited by **Walter E. Wolf**
Comment on the equilibrium assumption in chemical kinetics. **Alejandro C. Olivieri.** 1002

Chem I supplement, edited by **Mike Slabaugh** and **Helen James**
Acid rain effects on stone monuments. **A. Elena Charola.** 436
Butter and margarine: Their chemistry, their conflict. **William R. Oliver** and **Diana Combs McGill.** 596
Chemicals in everyday life. **Raymond B. Seymour.** 63
Industrial applications of recombinant DNA technology. **Michael D. Jones** and **Jeffrey T. Fayerman.** 337

Chemical Abstracts Online in undergraduate chemistry: Part I. CA file, Boolean, and proximity operators, Searching. **Miroslav Krumpolc, Diana Trimakas,** and **Connie Miller.** 55
Chemical bond (CP). **Roger L. DeKock.** 934

Chemical principles revisited, edited by **Dan Kallus** and **Russell Larsen**
Annotating reaction equations. **R. J. Tykodi.** 243
The chemical bond. **Roger L. DeKock.** 934

Chemical vignettes
Whipping a wicked weed. 20
Chemicals in everyday life (CHEM I). **Raymond B. Seymour.** 63
Chemiluminescence demonstration, A multicolored luminol-based (TD). **John H. Chalmers, Jr., Michael W. Bradbury,** and **Jill D. Fabricant.** 969
Chemiluminescent clock reaction, Inorganic fireflies (TD). **Peter Jones, Jane E. Frew,** and **Nina Scowen.** 70
Chemist as teacher of history. **J. J. Zuckerman.** 828

Chemistry for kids, edited by **Richard Steiner**
A hands-on introduction to chemistry for gifted students in the intermediate grades. **Thomas G. Greco** and **Catherine B. Greco.** 537
An indicating experience for students. **Londa L. Borer.** 446
Chemistry for fifth and sixth graders: From plastic laundry basket "labs". **Karen Doyle Walton.** 714
Elementary school chemistry activities. **Spencer L. Seager** and **Karen T. Swenson.** 157
Pop-and-sniff experimentation: A high-sensory-impact teaching device. **Emeric Schultz.** 797

Chemistry on stamps, edited by **James O. Schreck** and **C. Marvin Lang.**
A simple postage stamp periodic table. **Ll. Garrigos, F. Ferrando,** and **R. Miralles.** 682
Alchemy and philately. **Gerard A. van Albada** and **James O. Schreck.** 869
Chemistry of postage stamps: Dyes, phosphors, adhesives. **John B. Sharkey.** 195
Teaching the concepts of metallurgy through the use of postage stamps. **Daniel Bartet P.** and **Eugenia Aguila G.** 526

Chemistry's creative women. **Nina Matheny Roscher.** 748
Chemists as learners. **Leslie C. Smedley, Jr.** 321
Chemists' delta, The (PO). **Norman C. Craig.** 668
Chemist-tree for National Chemistry Day. **John Liebermann, Jr.** 747
Chiral shift reagent analysis of enantioselectivity in baker's yeast reductions of ethylacetoacetate: An NMR experiment. **K. B. Lipkowitz** and **J. L. Mooney.** 985
Chirality, Molecular structure and. **David J. Brand** and **Jed Fisher.** 1035
Chlorofluorcarbons and stratospheric ozone. **Scott Elliott** and **F. S. Rowland.** 387
Chromatographic monitoring of neurochemicals in vivo, Approaches to voltammetric and (TICI). **Alice J. Cunningham** and **Joseph B. Justice, Jr.** A34

Chromatography
Analysis of aspartame by TLC. 1065
Analysis of vitamin C by high-pressure liquid chromatography. 187
Determination of impurities in whiskey using internal standard techniques. 1055
Determination of methanol in gasoline by gas chromatography. 1059
Longer lasting TLC spots developed with iodine vapors. 1066
Quantitative application of thin-layer chromatography in the analysis of organic compounds (GB). 625
Separation and identification of cinnamic acids by TLC. 182

Chromium (III) complexes: An advanced inorganic chemistry experiment, Electronic spectra of cis and trans disubstituted octahedral. **Francesc Teixidor, Jaume Casabo,** and **Andreu Solans.** 461
Chromium(II) compounds (LTE). **G. L. Silver.** 646
Chrysanthemic ester: An undergraduate experiment, A synthesis of. **Lawrence F. Kelly.** 1061
Cinnamic acids by TLC, Separation and identification of. **Florinda O. Bobbio, Paulo A. Bobbio,** and **Sandra C. de Souza.** 182
Classroom demonstrations of polymer principles. **F. Rodriguez, L. J. Mathias, J. Kroschwitz,** and **C. E. Carraher, Jr.**
Part I. Molecular structure and molecular mass. 72
Part II. Polymer formation. 886
Clock reaction, Inorganic fireflies: A Chemiluminescent (TD). **Peter Jones, Jane E. Frew,** and **Nina Scowen.** 70
Clock reaction, The arsenic(III) sulfide (TD). **Kenneth W. Watkins.** 255
Coffee can lids, Inexpensive low-frequency IR windows using Tupperware seals and polyethylene. **Vinita C. Dew.** 975
Cola clock: A new flavor to an old classic (TD). **Richard A. Russell** and **Robert W. Switzer.** 445
Collision theory and an American tradition (AA). **Lee A. Krug.** 1000
Color classification of coordination compounds. **Laurence Poncini** and **Franz L. Wimmer.** 1001
Color images of molecules (CS). **John J. Farrell.** 240
Colorimetric titration experiment with laser excitation and computer-interfaced endpoint detection (CS). **Manish A. Mehta** and **Richard F. Dallinger.** 1019
Combustion and explosion, A convenient demonstration of (TD). **Ariel E. Fenster, David N. Harpp,** and **Joseph A. Schwarcz.** 984
Comfrey, Pyrrolidizide alkaloids: Testing for toxic constituents of. **John J. Vollmer, Noemi C. Steiner, Gitte Y. Larsen, Krista M. Muirhead,** and **Russell J. Molyneux.** 1027
Commodore microcomputer/Mettler 440 balance interface (CS). **Harvey F. Blanck.** 240
Complexes as color indicators for solvent parameters, Metal (LTE). **Y. Y. Lim, R. W. Soukup,** and **R. Schmid.** 904
Complexes, Stability ruler for metal ion. **R. Bruce Martin.** 402
Compound, Part II, Name that (EQE). **A. Mancott.** 159
Computer interfacing to laboratory instruments: How to minimize noise interferences (TICI). **Mary Karpinski.** A100

Computer series, edited by **John W. Moore**
79. Use of commercial spreadhseet programs in the science laboratory. **Jerome S. Levkov.** 31
79. Using electronic laboratory notebook software inthe instrumental analysis course. **Michael F. Delaney.** 29
80. ChemPlate and Hopkins, A template and font for drawing molecular structures with the Macintosh computer. **Jih Ru Hwu, John M. Wetzel,** and **Jeffrey A. Robl.** 135
Using a spreadsheet to calculate the frgacity of a van der Waals gas. **Douglas A. Coe.** 137

Critical point of CO_2, Safe cell for viewing the. **Beatrice Botch** and **Rubin Battino.** 347
Critical-thinking writing assignments in general chemistry. **Naola VanOrden.** 506
Cryoscopic and calorimeter measurements and lecture demonstrations, An inexpensive linear thermistor thermometer for (CS). **James W. Beatty** and **Todd B. Colin.** 500
Crystallization of thermaly unstable or highly soluble compounds, Method for. **Thanun M. Pyriadi.** 813
Crystallographic symmetry point group notation flow chart. **G. L. Breneman.** 216
Cubes having a common line (or plane), An easily constructed model of twin. **Shukichi Yamana.** 761
Cubic closest-packed structure, An easily constructed model of a coordination polyhedron that represents the. **Shukichi Yamana.** 1040

Curriculum
- Characteristics and needs of professional chemists in containing education. 321
- Chemist as teacher of history. 828
- Chemistry for the allied health students. 707
- Cosmetic science (CE). 619
- Course in analytical–environmental interface. 529
- Course in fundamentals of chemical engineering for high school science teachers. 316
- Evaluation of three instructional methods for teaching general chemistry. 794
- Generalist chemistry major for liberal arts and science degrees. 703
- Hazardous materials in marine transportation. 34
- Lab reports as part of writing across the curriculum. 996
- Mathematics and science program for gifted high school students. 612
- Observation and the teaching of science. 429
- Physical chemistry at USAFA: Personalized instruction. 784
- Priorities in the high school curriculum (LTE). 382
- Problem-solving laboratory exercises. 985
- Report of the Committee on Chemical Education for the health professions. 699
- Status of undergraduate research: An update. 163
- Student-designed labs (GB). 961
- Technologists, Safety course for chemical (SAFETY). A6
- UCI summer science institute. 234
- Using a college facility for a high school AP course. 324
- Who is teaching the history of chemistry? 991
- Workshop on polymers for pre-high school teachers and students. 868

Cyanide in foodstuffs, Anodic polarography of. **T. J. Farrell, R. J. Laub,** and **E. P. Wadsworth, Jr.** 635
Cyanide incident case study, Hazards in a photography lab: A (SAFETY). **Cliff Houk** and **Charles Hart.** A324
Cyclic molecule, Simple formula for the number of rings in a. **P. Anantha Reddy.** 400
Cyclic voltammetry experiment using a mercury electrode. **Enrique Brillas, Jose A. Garrido, Rosa M. Rodriguez,** and **Javier Domenech.** 189
Cycloaddition: An undergraduate organic experiment, Lewis acid catalysis of a Diels–Alder. **Alan P. Marchand, V. Vidyasagar, Mark B. Bunkner,** and **Philmore O. Holman.** 642
Cyclohexanone sunburn dosimeter, Visual manifestation of the Norrish Type I reaction. **Felix A. Carroll, Geoffrey F. Strouse,** and **Jon M. Hain.** 84
Cyclopentadiene from its dimer, Preparation of. **Ronald S. Dickson, Bruce J. Dobney,** and **Frank W. Eastwood.** 898
Cyclopentadiene, Generation of. **Benjamin P. Ruekberg.** 726
Cyclopeptide alkaloids. **Krishna L. Bhat** and **Madeleine M. Joullie.** 21

Density of solids (LTE). **William D. Hill, Jr.** 92
Deriving $S = k\ \Omega$ (LTE). **Ramachandra H. Balundgi** and **Tejraj M. Aminabhavi.** 730
Descriptive chemistry (PO). **Henry A. Bent** and **Brian E. Bent.** 249
Descriptive chemistry, Redox demonstrations and (TD). **Charles E. Ophardt.**
Part 1. Metals. 716
Part 2. Halogens. 807
Descriptive chemistry versus theoretical (PO)? **Benjamin P. Huddle.** 765
Descriptive inorganic chemistry: A possible response. **Fred H. Walters.** 540
Descriptive units, Fundamental and (LTE). **H. R. Kemp.** 191
Determination of Henry's law constant for carbon dioxide. **Jack B. Levy, Fred M. Hornack,** and **Matthew A. Levy.** 260
Determination of the heat of sublimation of iodine: A physical chemistry laboratory experiment. **Richard W. Schwenz.** 551
Device for producing, measuring, and moving gas, An inexpensive (IC). **Richard Wojt.** 1052
Diagonal relationships, Reexamining the. **Timothy P. Hanusa.** 686
Diagrams for thermodynamic systems, Mnemonic. **James M. Phillips.** 674
Diatomic vibrations revisited. **P. L. Goodfriend.** 753
Dielectric behavior of associated liquids and mixtures according to the Kirkwood–Frohlich statistical theory. **H. G. Lohmannsroben.** 679
Diels–Adler cycloaddition: An undergraduate organic experiment, Lewis acid catalysis of a. **Alan P. Marchand, V. Vidyasagar, Mark B. Buckner,** and **Philmore O. Holman.** 642
Dimerization of formic acid by FTIR, Heat of. **Giles Henderson.** 88
Dipeptide formation, The synthesis of an amino acid derivative and spectroscopic monitoring of. **Richard J. Simmonds.** 966
Displacement reactions, Methods for preparing aqueous solutions of chlorine and bromine for halogen. **Gene A. Hiegel, Miguel H. Abdala, S. Vincent Burke,** and **Donald P. Beard.** 156
Dissolution of urea, The entropy of. **Miles Pickering.** 723
Distribution plots and sorting, Enhance your spreadsheet capabilities: Frequency (CS). **Richard T. Luibrand** and **Varon Smith.** 241

Division of Chemical Education
Election results. 946
Nominations for offices. 595
Report of Ninth Biennial Conference on Chemical Education. 96
Report of the ACS examination institute. 283
Report: Task force on safety policies for Division meeting sessions. 634
The Tenth Biennial Conference on Chemical Education. 827

DNA: Biological significance, Supercoiled (CB). **Richard R. Sinden.** 294
DNA model for every student. **Antony C. Wilbraham.** 806
DNA restriction fragments, Action of endonucleases and methylases: Electrophoretic analysis of. **Kotaro J. Kaneko, John M. Burke,** and **Lawrence J. Kaplan.** 274
DNA technology, Industrial application of recombinant (CHEM I). **Michael D. Jones** and **Jeffrey T. Fayerman.** 337
Dreiding models and the Macintosh, Stereographic images using. **Michael J. Strauss** and **Gordon Gribble.** 850
Drying: Anomaly and the chemical community, Intensive. **Harold Goldwhite.** 657
Dyeing of eggs, Chemistry in the. **Robert C. Mebane** and **Thomas R. Rybolt.** 291
Dyes, phosphors, adhesives, Chemistry of postage stamps (STAMP). **John B. Sharkey.** 195

E

Editorially speaking
Are research-orier ed institutions smart enough to learn? 289
Computing, chemistry, and education. 989
Convenience as a measure of ignorance. 1
Decisions. 559
Literacy. 733
November 6: A day of opportunity. 473
On becoming scientifically literate. 821
Scientific literacy and education. 905
The burden of research. 647
The national teacher certification board. 385
TWo cultures: The paradox continues. 193

Effect of pH and chloride ion concentration on the mobilities of various cations in soil. **Melody Brown, Mary Sutherland,** and **Stephen Leharne.** 448
Eggs, Chemistry in the dyeing of. **Robert C. Mebane** and **Thomas R. Rybolt.** 291
Elasticity and characterization of elastomeric networks, Advances in rubber. **Jean Pierre Queslel** and **James E. Mark.** 491
Elastomers: A case of decreasing length upon heating, Stretched. **S. B. Clough.** 42
Election results and reactions yields (AA). **Romeu C. Rocha–Filho.** 248
Electroantennography cell for testing the activity of pheromones, Selective. **Roberto Rozas** and **Dagor Perez.** 356
Electrochemical experiment, Faradaic impedance diagrams: A computer (CS). **F. Arnau, P. Ll. Cabot, M. Cortes,** and **J. M. Costa.** 792
Electrochemistry demonstrations with an overhead projector (OP). **Charles R. Ward** and **Thomas J. Greenbowe.** 1021

Electrochemistry
Anodic polarography of cyanide in foodstuffs. 635
Cyclic voltammetry experiment using a mercury electrode. 189
Introducing the Pourbaix diagram for cobalt (F&R). 165
Outmoded terminology: The hydrogen electrode (TF). 885
Voltammetric monitoring of Br^- and Br^{3-} concentrations during the bromination of styrene by Br^{3-}. 96
Whence the copper ion (LTE)? 334

Electrode, A cyclic voltammetry experiment using a mercury. **Enrique Brillas, Jose A. Garrido, Rosa M. Rodriguez,** and **Javier Domenech.** 189
Electrode, Outmoded terminology: The normal hydrogen (TF). **R. W. Ramette.** 885
Electrode storage, Safe and. **Howard P. Williams.** 556
Electrodeposition of silver at an air–water interface, Fractal structures obtained by (TD). **Woodfin V. Ligon, Jr.** 1053
Electrolysis experiments for the overhead projector (OP). **Kenneth E. Kolb.** 891
Electrolysis of water, Demonstration of the pH changes during the (TD). **A. Habich** and **H. R. Hausermann.** 171
Electrolysis omission (LTE). **Kenneth E. Kolb** and **Doris K. Kolb.** 92
Electromagnetic spectrum, Spectroscopic analysis using the near-infrared region of the. **Elbert W. Crandall.** 466
Electron configuration, A two-dimensional working model of the neon. **Clark E. Bricker.** 133
Electron spectroscopic methods in teaching. **Michael Allan.** 418
Electron spin resonance spectra of organic radicals, Introduction to the interpretation of. **Nigel J. Bunce.** 907
Electronegativity: A mnemonic rule. **S. Kapellos** and **A. Mavrides.** 941
Electronic device for conductivity experiments, Commercially available (IC). **Frank J. Gadek.** 281
Electronic device for conductivity experiments, Easily made (IC). **Frank J. Gadek.** 628
Electronic spectra of cis and trans disubstituted octahedral chromium(III) complexes: An advanced inorganic chemistry experiment. **Francesc Teixidor, Jaume Casabro,** and **Andreu Solans.** 461
Electronic spectra of oxovanadium(IV), VO^{2+}, complexes, Interpretation of (LTE). **John R. Wasson.** 288
Electronic structure for atoms and monatomic ions, Ground state. **R. J. Tykodi.** 943
Electrophoresis in a covered butter dish, Gel. **T. R. Hopkins** and **K. Sreekrishna.** 279
Electrophoretic analysis of DNA restriction fragments, Action of endonucleases and methylases. **Kotaro J. Kaneko, John M. Burke,** and **Lawrence J. Kaplan.** 274
Elemental etymology: What's in a name (LTE)? **David W. Ball.** 472
Elementary school chemistry activities (CK). **Spencer L. Seager** and **Karen T. Swenson.** 157
Elements and their atoms, A new road to reactions: Part 5. The. **Wobbe de Vos** and **Adri H. Verdonk.** 1010
Enantiomers the easy way, Drawing. **Howard E. Dunn.** 1042
Enantioselectivity in baker's yeast reductions of ethylacetoacetate: An NMR experiment, Chiral shift reagent analysis of. **K. B. Lipkowitz** and **J. L. Mooney.** 985
Endonucleases and methylases: Electrophoretic analysis of DNA restriction fragments, Action of. **Kotaro J. Kaneko, John M. Burke,** and **Lawrence J. Kaplan.** 274
Energy: A polymer example of entropy, Converting sunlight to mechanical. **Lon J. Mathias.** 889
Energy relationships of corn production and alcohol fermentation. **Thomas E. Van Koevering, Michael D. Morgan,** and **Thomas J. Younk.** 11

Engineering and applied kinetics, A computer exercise in chemical reaction (CS). **Tapio Salmi.** 876
Engineering for high school science teachers, Course in fundamentals of. **Gordon A. Lewandowski** and **Reginald P. T. Tomkins.** 316
Enthalpy and "Hot Wheels": An analogy (AA). **Marcia C. Bonneau.** 486
Entropy, Converting sunlight to mechanical energy: A polymer example of. **Lon J. Mathias.** 889
Entropy criterion for equilibrium (LTE). **Norman C. Craig.** 470
Entropy of dissolution of urea. **Miles Pickering.** 723
Entropy production, Hysteresis in metal hydrides: An illustration of. **Ted B. Flanagan, C. N. Park,** and **D. H. Everett.** 944

Environmental chemistry
Acid rain effects on stone monuments (CHEM I). 436
Ames testing for mutagens and carcinogens in air. 391
Chlorofluorocarbons and stratospheric ozone. 387
Demonstrating the chemistry of air pollution (TD). 893
Effect of pH and chloride ion concentration on the mobilities of various cations in soil. 448
Experiment using a nephelo-turbidity meter. 729
Soil pH–a first experiment in quantitative analysis. 447

Enzymes: An undergraduate biochemistry experiment, Reactions of lipolytic. **Kelly A. Clingman** and **Joseph Hajdu.** 358
Enzymes, Chemical modification of catalytically essential amino acid residues in. **Manuel G. Roig.** 77
Enzymes, Reversible activators of (CB). **John F. Sebastian.** 1031
Enzymes, RNA's as catalysts: A new class of (CB). **George M. McCorkle** and **Sidney Altman.** 221
Equation rates, Rival (LTE). **A. C. Olivieri.** 286
Equations, A new method to balance chemical (INS). **Arcesio Garcia.** 247
Equations, Annotating reaction (CP). **R. J. Tykodi.** 243
Equations, Unbalanced chemical (LTE). **William B. Jensen.** 646
Equilateral triangle: Exact solution of a nonseparable problem, Particle in an. **Wai-Kee Li** and **S. M. Blinder.** 130
Equilibria: A derivation of the van't Hoff rules, The effect of temperature and pressure on. **H. R. Kemp.** 482
Equilibrium assumption in chemical kinetics, Comment on the (CC). **Alejandro C. Olivieri.** 1002
Equilibrium constants for water, Correct (LTE). **W. George Baldwin** and **C. Eugene Burchill.** 1067
Equilibrium: Some further comments on the stability of the system, On the minimum of the Gibbs free energy involved in chemical. **M. Deumie, B. Boulil,** and **O. Henri-Rousseau.** 201
Equilibrium: The continuous-flow bottle, Far from. **Leonard J. Soltzberg.** 147
Equilibrium: The flashback oscillator. Far from. **Leonard J. Soltzberg, Michele M. Boucher, Dawn M. Cane,** and **Stacey S. Pazar.** 1043
Equilibrium voltage of an ion-selective electrode, Estimating the. **On-Kok Chang.** 91
Error-free, Slopes of straight lines when neither axis is. **A. H. Kalantar.** 28
Establishment of a regional high school instrumentation center at Western Illinois University. **Donald M. Baird** and **Janos Szamosi.** 1051
Ether/water extractor, A continuous. **J. H. Choney, M. W. Adkins,** and **E. J. Eisenbraun.** 970
Ethnobotany: The chemist's source for the identification of useful natural products. **Denise M. Hosler** and **Michael A. Mikita.** 328
Etymology: What's in a name, Elemental (LTE). **David W. Ball.** 472
Evaluation of three instructional methods for teaching general chemistry. **Lance E. Jackman, Wayne P. Moellenberg,** and **G. Dana Brabson.** 794
Evaporation first?, Which will (TD). **Allan Stenmark.** 351

Exam question exchange, edited by **John J. Alexander**
A quiz on stereochemistry. **Abhik Ghosh.** 1015
Counting halomethanes. **Parthasarathy Nambi.** 678
Metabolic questions. **Hugh A. Akers.** 159
Mole fraction revisited. **A. Mancott.** 320
Molecular weights come of age. **J. Tietjen.** 401
Name that compound, Part II. **A. Mancott.** 159
On a relation between fugacity and pressure. **Salem Jagannathan.** 677
Stereoisomerism as a result of free radical chlorination of a nonstereoisomeric substance. **John E. Fulkroad.** 533
Using sequencing questions in chemistry examinations. **William M. Hemmerlin.** 532

Exercise in chemical reaction engineering and applied kinetics, A computer (CS). **Tapio Salmi.** 876
Expanded polystyrene: An experiment for undergraduate students. **Alexandre Feigenbaum** and **Denise Scholler.** 810
Expert systems in the general chemistry laboratory, Application of (CS). **Frank A. Settle, Jr.** 340
Explosion, A convenient demonstration of combustion and (TD). **Ariel E. Fenster, David N. Harpp,** and **Joseph A. Schwarcz.** 984
Explosive safety, An orientation to. **Betty W. Harris.** 541
Extraction procedure for the determination of lead in gasoline by atomic absorption spectrometry. **Ragnar Bye.** 188
Extractor, A continuous ether/water. **J. H. Choney, M. W. Adkins,** and **E. J. Eisenbraun.** 970

F

Factor-label approach, Solving chemistry problems without utilizing the (SYMP). **Frank Cardulla.** 519
Fajans's quanticule theory of a chemical bond: A tragedy of a scientist, Reception of Kasimir. **Jozef Hurwic.** 122
Far from equilibrium: The continuous-flow bottle. **Leonard J. Soltzberg.** 147
Far from equilibrium: The flashback oscillator. **Leonard J. Soltzberg, Michele M. Boucher, Dawn M. Cane,** and **Stacey S. Pazar.** 1043
Faradaic impedance diagrams: A computer electrochemical experiment (CS). **F. Arnau, P. Ll. Cabot, M. Cortes,** and **J. M. Costa.** 792
Fehling test and a modified corrected Benedict test, A modified. **William D. Hill, Jr.** 984
Fermentation, Energy relationships of corn production and alcohol. **Thomas E. Van Koevering, Michael D. Morgan,** and **Thomas J. Younk.** 11
Fifth and sixth graders: From plastic laundry basket "labs", Chemistry for (CK). **Karen Doyle Walton.** 714

Filtrates and residues
A convenient, low-cost method for determining sulfate in acid rain. **Nicholas Johns** and **Stephen J. Longstaff.** 449
A laboratory exercise introducing students to the Pourbaix diagram for cobalt. **Dick Powell, Jim Cortz,** and **E. K. Mellon.** 165
A problem involving organic qualitative analysis. **D. H. Silvert.** 971
An example of a constant-rate reaction. **Khalid M. Tawarah.** 534
Charles's law: Students develop their own procedure. **Diane Rose.** 712
Easy demonstration of the visible spectrum using the Spectronic 20. **Marie Sherman.** 627
Hemoglobinometry: A biochemistry experiment that utilizes the principles of transition metal chemistry. **Vincenzo Giuliano** and **John Paul Rieck.** 354
Percent oxygen in air. **George F. Martins.** 809
Simple identification of inorganic salts. **Ronald I. Perkins.** 258
The stability of potassium permanganate solutions. **Thomas Rees.** 1058

Fischer projections, An astonishingly easy method for determining R and S for. **Ben Ruekberg.** 1034
Flashback oscillator, Far from equilibrium: The. **Leonard J. Soltzberg, Michele M. Boucher, Dawn M. Cane,** and **Stacey S. Pazar.** 1043
Flour: A recipe for success, The rise of self-rising. **Malcolm McCamish.** 710
Flow chart, Crystallographic symmetry point group notation. **G. L. Breneman.** 216
Fluorescence spectrometric analysis of geologic materials, X-ray (TICI). **John A. Anzelmo** and **James R. Lindsay.**
Part 1. Principles and instrumentation. A181
Part 2. Applications. A200
Fluoromethanes in organic synthesis. **T. Stephen Everett.** 143
Font for drawing molecular structures with the Macintosh computer, ChemPlate and Hopkins, A template and (CS). **Jih Ru Hwu, John M. Wetzel,** and **Jeffrey A. Robl.** 135
Foodstuffs, Anodic polarography of cyanide in. **T. J. Farrell, R. J. Laub,** and **E. P. Wadsworth, Jr.** 635
Forensic research: Another viewpoint, Trends in (LTE). **William Fox.** 819
Format for the periodic table of elements: Concerns of high school chemistry teacher, The new (LTE). **C. V. Krishnan.** 558
Fourier transform infrared spectrophotometry: A physical chemistry experiment, The kinetics of $Mo(CO)_6$ substitution monitored by. **Kenneth S. Suslick, Edward B. Flint,** and **James A. Jensen.** 547
Fourier transform infrared spectroscopy (TICI). **W. D. Perkins**
Part II. Advantages of FT-IR. A269
Part III. Applications. A296
Fourier transforms for chemists (TICI). **L. Glasser**
Part 1. Introduction to the Fourier transform. A228
Part 2. Fourier transforms in chemistry and spectroscopy. A260
Part 3. Fourier transforms in data treatment. A306
Fractal structures obtained by electrodeposition of silver at an air-water interface (TD). **Woodfin V. Ligon, Jr.** 1053
Franck–Condon principle, A good example of the. **Fakhruddin Ahmed.** 427
Free radical chlorination of a nonstereoisomeric substance, Stereoisomerism as a result of (EQE). **John E. Fulkroad.** 533
From revolution to evolution. **Herman Mark.** 858
FTIR, Heat of dimerization of formic acid by. **Giles Henderson.** 88
FTIR rotational spectroscopy. **Ron Woods** and **Giles Henderson.** 921
Fuels and materials from plants, High-energy. **Melvin Calvin.** 335
Fugacity and pressure, On a relation between (EQE). **Salem Jagannathan.** 677

Fugacity of a van der Waals gas, Using a spreadsheet to calculate the (CS). **Douglas A. Coe.** 137
Fulminating silver, and silver fulminate, Tollens's test (TF). **Ian D. Jenkins.** 164
Fume hoods, Upgrading laboratory (SAFETY). **G. Thomas Saunders.** A272
Fundamental and descriptive units (LTE). **H. R. Kemp.** 191

G

Gamma rays in binary compounds: A versatile illustration of Beer's law, Attenuation of. **E. W. Kleppinger** and **S. W. Yates.** 172
Gas–air mixtures of very low gas concentrations, Device for the preparation of feed. **V. Ramaswamy.** 375
Gas, An inexpensive device for producing, measuring, and moving (IC). **Richard Wojt.** 1052
Gas cylinders, An indicating rupture disk for. **Thomas J. Bruno.** 557
Gas, Using a spreadsheet to calculate the fugacity of a van der Waals (CS). **Douglas A. Coe.** 137
Gases: A persistent pitfall, Thermodynamics of "mixing" of ideal (TF). **Edwin F. Meyer.** 676
Gases and the history of chemistry, Parallels between adolescents' conception of. **Carlos J. Furio Mas, Juan Hernendez Perez,** and **Harold H. Harris.** 616
Gasoline by atomic absorption spectrometry, Extraction procedure for the determination of lead in. **Ragnar Bye.** 188
Gasoline by gas chromatography: A laboratory experiment, Determination of. **Stanford L. Tackett.** 1059
Gasoline: Its impact on the chemical industry, Nonleaded (IND). **Harold Wittcoff.** 773
GC approach, Plasticizers in PVC: A combined IR and. **W. H. Chan.** 897
GC experiment for quantitative analysis, Determination of impurities in whiskey using internal standard techniques: A. **Gary W. Rice.** 1055
Gel electrophoresis in a covered butter dish. **T. R. Hopkins** and **K. Sreekrishna.** 279

General chemistry
Acid rain effects on stone monuments (CHEM I). 436
Annotating reaction equations (CP). 243
Another auto analogy: Rate-determining steps (AA). 486
Application of expert systems in the general chemistry laboratory (CS). 340
Avogadro's number through a water drop calculation (INS). 611
Butter and margarine: Their chemistry, their conflict (CHEM I). 596
Carbon dioxide: Its principal properties displayed and discussed (BR). 167
Charles's law/vapor pressure apparatus (TD). 969
Charles's law: Students develop their own procedure (F&R). 712
Chemical bond (CP). 934
Chemicals in everyday life (CHEM I). 63
Chemistry for the allied health students. 707
Chemistry in the dyeing of eggs. 291
Cola clock: A new flavor to an old classic (TD). 445
Commercially available electronic device for conductivity experiments. 281
Concept learning versus problem solving. 508
Conductivity of solutions apparatus. 550
Control of variables and the conservation of matter (TD). 353
Converting sunlight to mechanical energy: A polymer example of entropy. 889
Correct equilibrium constants for water (LTE). 1067
Coupled oscillations (TD). 351
Critical-thinking writing assignments in good chemistry. 506
Crude iodine production processes (TS). 152
Data sheets: An instructional aid. 525
Demonstration of combustion and explostion (TD). 984
Demonstration of condensation–vaporization (TD). 70
Demonstration of high T_c superconductive powder. 353
Demonstration of the pH changes during the electrolysis of water (TD). 171
Demonstration of vapor pressure (TD). 968
Demonstrations the chemistry of air pollution (TD). 293
Density of solids (LTE). 92
Descriptive chemistry versus theoretical (PO)? 765
Descriptive chemistry (PO). 249
Descriptive inorganic chemistry: A possible response. 540
Determination of Henry's law constant for carbon dioxide. 260
Determining the two fundamental gas constants. 999
Effect of temperature and pressure on equilibria: A derivation of the van't Hoff rules. 482
Election results and reactions yields (AA). 248
Electrochemistry demonstrations with an overhead projector (OP). 1021
Electrolysis experiments for the overhead projector (OP). 891
Electronegativity: A mnemonic rule. 941
Enthalpy and "Hot Wheels": An analogy (AA). 486
Evaluation of three instructional methods for teaching general chemistry. 794
Evaporation to demonstrate intermolecular action (TD). 351
Example of a constant-rate reaction (F&R). 534
Expanded polystyrene: An experiment for undergraduate students. 810
Experiment in buffer capacity. 817
Fostering question-asking capability as a way to problem solving. 510
Fractal structures obtained by electrodeposition of silver at an air–water interface (TD). 1053
Fundamental and descriptive units (LTE). 191
General approach for teaching hydrolysis of salts. 957
Generic and harder problems: Teaching problem solving (SYMP). 516
Genetic engineering. 854
Ground state electronic structure for atoms and monatomic ions. 943
Hands-on versus computer simulation methods in chemistry. 232
Hard and easy ways to teach limiting reagent and mixing problems (INS). 698
How students imagine ideas. 766
Hydrogen atom spectrum using an AA spectrophotometer. 552
Introducing the Pourbaix diagram for cobalt (F&R). 165
K_{sp} determination of calcium sulfate (INS). 408
Lab exercise in guided inquiry format that teaches stoichiometry. 452
Le Chatelier's principle, solubility, and deja vu (LTE). 287
Le Chatelier: Right or wrong (LTE)? 1069
Levitating a magnet using a superconductive material. 851
Lewis structures for compounds with expanded octets. 403
Making sense of the nomenclature of the oxyacids and their salts (INS). 409
Metabolic questions (EQE). 159
Methane pistol demonstrates bonding characteristics (TD). 171
Method for determining sulfate in acid rain (F&R). 449
Misleading statements about the transition state. 208
Modified Piagetian theory applied to teaching. 502
Molar and equivalent amounts and concentrations. 246
Mole fraction revisited (EQE). 320
Molecular weights come of age (EQE). 401
Multicolored luminol-based chemiluminescence demonstration (TD). 969
Musical molecular weights revisited (TD). 1053
Name that compound, Part II (EQE). 159
New method to balance equations (INS). 247
New road to reaction. 692, 1010
New stoichiometry for copper dissolution in nitric acid (LTE). 1069
New way to introduce concept of elements and atoms. 1010
Nuts and bolts approach to explain limiting reagents. 134
Periodic table subgroups designations. 9
Permission (LTE). 903
pH measurements on the overhead projector (OP). 964
Physical and chemical properties for the overhead projector (OP). 891
Polymer properties and testing: Definitions. 866
Polymers in caulking and sealant materials. 861
Postage stamp periodic table (STAMP). 682
Preparation of lead compounds: An exercise in applied chemistry. 811
Preparative exercises in general chemistry (GB). 252
Project lab for an advanced general chemistry course featuring the amino acid, glycine. 899
Radiationless relaxation and red wine. 995
Reaction stoichiometry and suitable "coordinate systems". 958
Recent advances in the concept of hard and soft acids and bases. 561
Redox demonstrations and descriptive chemistry: Part 1. Metals (TD). 716
Redox demonstrations and descriptive chemistry: Part 2. Halogens (TD). 807
Reexamining the diagonal relationships. 686
Report of the Committee on Chemical Education for the health professions. 699
Requiring good writing in chemistry courses. 505
Rise of self-rising flour. 710
Role of algorithms in teaching problem solving (SYMP). 513
Sematic–linquistic method of solving verbal problems. 49
Should students always use algorithms to solve problems (SYMP)? 514
Should we teach the mole (LTE)? 192
Simple experiment with unknown liquids (OP). 964
Sociology and Pauli's aufbau rules. 27
Solving chemistry problems without utilizing the factor-label approach (SYMP). 519
Solving limiting reagent problems (LTE). 472
Stability of potassium permanganate solutions (F&R). 1058
Stepwise reduction of permanganate in alkaline conditions: A lecture demonstration (TD). 624
Student preparation for prelab sessions (VIEW). 621
Tale of two sweetners (TS). 954
Teaching students to expect the unexpected (INS). 155
Teaching the concepts of metallurgy through the use of postage stamps (STAMP). 526
The name's the game in problem solving. 524
The solution is not the problem (SYMP). 523
The structure of the water molecule: What should we tell the students? 124
Two-dimensional working model of the neon electron configuration. 133
Understanding the particulate nature of matter. 695
Unusual laboratory practical examinations for. 622
Using algorithms to teach problem solving (SYMP). 518
Using NASA and the space program to help high school and college student learn chemistry. 60, 228

Using sand the iron filings to teach concepts of mixtures (AA). 154
Using the copper sulfide experiment to show the limits of theory (PO). 539
Versatile demonstration with calcium carbide (TD). 444
What goes on in student's heads in lab (SYMP)? 521
When oil and water do not mix (OP). 1022

General chemistry, Computer programming in (CS). **G. L. Breneman** and **O. J. Parker.** 584
Generation of cyclopentadiene. **Benjamin P. Ruekberg.** 726
Genetic engineering: Or how to build a better (at least different) mousetrap. **Charles E. Carraher, Jr.** and **Deborah W. Siegmann.** 854
Geologic materials, X-ray fluorescence spectrometric analysis of (TICI). **John A. Anzelmo** and **James R. Lindsay.** A181, A200
Gibbs free energy involved in chemical equilibrium: some further comments on the stability of the system, On the minimum of the. **M. Deumie, B. Boulil,** and **O. Henri-Rousseau.** 201
Gifted students in the intermediate grades, A hands-on introduction tochemistry for (CK). **Thomas G. Greco** and **Catherine B. Greco.** 537
Glass transition temperatures, Polymer. **David R. Burfield.** 875
Glassware made feasible via an inexpensive (no-cost) glass lathe, Difficult repairs in. **Carl Stransky** and **Ron Estler.** 967
Glucose and other aldoses, Configurations of. **Ronald Bentley** and **Janet L. Popp.** 15

Goals, edited by **Prudence Phillips** and **David A. Phillips**
History of chemistry. **George B. Kauffman.** 931
Utilizing a historical perspective in the teaching of chemistry. **Joseph W. Kamsar.** 931
Why teach biochemistry? **Gil Downs.** 339

Going beyond, going further, edited by **Neil Ettinger**
Preparative exercises in general chemistry. **George B. Kauffman.** 252
Quantitative application of thin-layer chromatography in the analysis of organic compounds: Determining the molecular weights of 2,4-dinitrophenylhydrazones and dicarboxylic acids. **Vincenzo Giuliano** and **John Paul Rieck.** 625
Quaternary ammonium halides: Versatile reagents for precipitation titrations. **Walter S. Selig.** 141
Student-designed labs. **Rick Broniec.** 961

Grading difficulties and a way to handle them, Two. **Howard Dinsmore.** 517
Gran plot methodology, Advances in acid-base. Lowell M. Schwartz. 947
Graph theory, Facile calculations of the charactersitic polynomial and π-energy levels of molecules using. **Jerry Ray Dias.** 213
Graphical flaw in the carboxylic acid/alcohol relative acidity argument, On a common (TF). **Ronald W. McClard.** 416
Grignard reagent, An improved preparation of a. **Timothy S. Eckert.** 179
Grotthus H^+ conductance mechanism?, What is the physical significant of the pictures representing the (TF). **H. G. Hertz, B. M. Braun, K. J. Muller,** and **R. Maurer.** 777
Ground state electronic structure for atoms and monatomic ions. **R. J. Tykodi.** 943
Guided inquiry format, Simple, safe, and inexpensive laboratory exercise in the. **John M. De Moura** and **Joseph A. Marcello.** 452

Hall and the great aluminum revolution, Charles Martin (PROFILES). **Vinay Kumar** and **Linda Milewski.** 690
Halogen displacement reactions, Methods for preparing aqueous solutions of chlorine and bromine for. **Gene A. Hiegel, Miguel H. Abdala, S. Vincent Burke,** and **Donald P. Beard.** 156
Halogens, Redox demonstrations and descriptive chemistry: Part 2 (TS). **Charles E. Ophardt.** 807
Halomethanes, Counting (EQE). **Parthasarathy Nambi.** 678
Hands-on versus computer simulation methods in chemistry. **Donald R. Bourque** and **Gaylen R. Carlson.** 232
Hard and soft acids and bases, Recent advances in the concept of. **Ralph G. Pearson.** 561
Hard ways and easy ways (INS). **Lowell M. Schwartz.** 698
Hazard in inorganic chemistry laboratories, Is thioacetamide a serious health (SAFETY). **Hannu Elo.** A144
Hazard in thermite reaction variation (LTE). **Arthur Moss.** 257
Hazardous materials in marine transportation: A practical course. **Thomas J. Haas** and **Jerzy J. Kichner.** 34
Hazardous waste operations in laboratories, Self audits of (SAFETY). **Kenneth E. Fischer.** A207
Hazards in a photography lab: A cyanide incident case study (SAFETY). **Cliff Houk** and **Charles Hart.** A234
HAZOP: A hazard and operability technique, An introduction to (SAFETY). **Martin J. Pitt.** A44
Health chemistry, Organic synthesis program for allied (CS). **Patrick Flash.** 238
Health hazard in inorganic chemistry laboratories, Is thioacetamide a serious (SAFETY). **Hannu Elo.** A144
Health professions: Report of the Committee on Chemical Education for the health professions, A syllabus for a two-semester chemistry course for. **John M. Daly** and **Jerry L. Sarquis.** 699
Health students, Chemistry for the. **Donald H. Williams.** 707
Heat capacity ratios using Apple II, Audio frequency measurements for (CS). **Robert V. St. Louis.** 788
Heat in thermodynamic processes, General definitions of work and. **Eric A. Gislason** and **Norman C. Craig.** 660
Heat of dimerization of formic acid by FTIR. **Giles Henderson.** 88
Heat of sublimation of iodine: A physical chemistry laboratory experiment, Determination of the. **Richard W. Schwenz.** 551
Heat of vaporization of nitrogen. **Peter Hamlet.** 1060
Heisenberg uncertainty principle: An application to the shell structure of atoms and orbit descriptions of molecules (LTE). **Richard D. Harcourt.** 1070
Helium discharge source studied by photoelectron spectroscopy, The far ultraviolet emission of a. **J. Barrie Peel** and **Ellak I. von Nagy-Felsobuki.** 463
Helium sequence, Two-parameter wave functions for the. **Wai-Kee Li.** 128
Hemoglobinometry: A biochemistry experiment that utilizes the principles of transition metal chemistry (F&R). **Vincenzo Giuliano** and **Jonn Paul Rieck.** 354
Henry's law constant for carbon dioxide, Determination of. **Jack B. Levy, Fred M. Hornack,** and **Matthew A. Levy.** 260
Hexagonal closest-packed structure, An easily constructed model of a coordination polyhedron that represents the. **Shukichi Yamana.** 1033

High school chemistry

Chemistry of plastics. 45
Classroom demonstrations of polymer principles. 72, 886
Course in fundamentals of chemical engineering for high school science teachers. 316
Demonstration of high T_c superconductive powder. 853
Demonstration of vapor pressure (TD). 968
Development of polymer chemistry as seen by Herman Mark. 858
Device to demonstrate the principles of photometry and three experiments for its use. 630
Electronegativity: A mnemonic rule. 941
Establishment of a regional high school instrumentation center at Western Illinois University. 1051
Genetic engineering. 854
Hands-on versus computer simulation methods inchemistry. 232
Hard and easy ways to teach limiting reagent and mixing problems (INS). 698
High-energy fuels and materials from plants. 335
Indigo plant as a teaching material. 332
Levitating a magnet using a superconductive material. 851
Mathematics and science program for gifted high school students. 612
New road to reactions. 692, 1010
New way to introduce concept of elements and atoms. 1010
Olfactory delights. 799
Parallels between adolescents' conception of gases and the history of chemistry. 616
Photosynthesis and carbon dioxide fixation. 302
Plastic materials for insulating applications. 39
Polymer literature for classrooms. 47
Polymer nomenclature. 36
Polymer properties and testing: Definitions. 866
Polymers in caulking and sealant materials. 861
Postage stamp periodic table (STAMP). 682
Priorities in the high school curriculum (LTE). 382
Rise of self-rising flour. 710
Stretched elastomers. 42
The many chemical names for H_2O. 697
Thermodynamics and the bounce. 43
UCI summer science institute. 234
Using NASA and the space program to help high school students learn chemistry. 60, 228
Workshop on polymers for pre-high school teachers and students. 868

High school chemistry as preparation for college chemistry. **Joseph S. Krajcik** and **Robert E. Yager.** 433
High school chemistry teacher, The new format for the periodic table of elements: Concerns of a (LTE). **C. V. Krishnan.** 558
High school students choose chemistry?, Why do. **Babu George, V. P. Wystrach,** and **Ronald I. Perkins.** 431
High school–college collaboration for the teaching of chemistry. **Stanley Jay Shapiro.** 324
High-pressure liquid chromatography, Analysis of vitamin C by. **David E. Goodney.** 187
History of chemistry (GOALS). **George B. Kauffman.** 931

History of chemistry?, Who is teaching the. **Kenneth G. Everett** and **Will S. Deloach.** 991

History
A chemical interpretation of alchemy. 994
A good idea leads to a better buffer (CB). 803
Academic women chemists in the 20th century: Past, present, projections. 823
Alchemy and philately (STAMP). 869
Alexander Borodin: Full-time chemist, part-time musician (PROFILES). 326
Alfred Werner's overlooked opportunity. 604
Biography of Elliot Ritchie Alexander, Jr. (CHS). 882
Charles Martin Hall and the great aluminum revolution (PROFILES). 690
Chemist as teacher of. 828
Chemistry's creative women. 748
Development of polymer chemistry as seen by Herman Mark. 858
Discovery of NMR paramagnetic shift reagents (CHS). 140
Dorothy Wrinch and the structure of proteins (LTE). 286, 1069
Elemental etymology: What's in a name (LTE). 472
Giorgio Piccardi (1895–1972), Italian physical chemist and master of the sun. 205
In memoriam: John F. Baxter, Jr. (1909–1987). 752
In memoriam: Robert C. Brasted. 302
In memoriam: Theodore Askounes–Ashford
Intensive drying: Anomaly and the chemical community. 657
Joseph Priestley, Preeminent amateur chemist (PROFILES). 745
J. H. van't Hoff (PROFILES). 573
Luther's 1906 discovery and analysis of chemical waves. 742
Origin of potentiometric sensors (LTE). 384
Origin of the term quantum (LTE). 383
Propagation of chemical reactions in space. 740
Reacquaintance with the limelight. 306
Reception of Kasimir Fajans's quanticule theory of the chemical bond: A tragedy of a scientist. 122
The discovery fo the chemical transmission of nerve impulses by Otto Loewi. 770
Utilizing a historical perspective in the teaching of chemistry (GOALS). 931
Walther Nernst and the last law. 3
Wartime research on RDX (CHS). 599
Werner and Jorgensen: Presenting history with a computer (CS). 688

Homogeneous catalysis: Synthesis of phenylethoxycarbene tungsten pentacarbonyl and polymerization of norbornene and phenylacetylene, An undergraduate experiment in. **Dider Villemin.** 183
Hoods, Upgrading laboratory fume (SAFETY). **G. Thomas Saunders.** A272
Huckel method, Molecular orbital calculations using the simple (CS). **Jonathan H. Reeder.** 499
Huckel MO theory and electron spin resonance in the spectroscopy course (CS). **Ronald D. McKelvey.** 497
HVAC systems: A troika, Laboratory (SAFETY). **Earl L. Walls.** A314
Hydroformylation of 1-hexene utilizing homogeneous rhodium catalysts: Regioselectivity as a function of conversion. **Brian E. Hanson** and **Mark E. Davis.** 928
Hydrogen atom spectrum using an AA spectrophotometer. **John Douglas** and **Ellak I. von Nagy–Felsobuki.** 552
Hydrogen electrode, Outmoded terminology: The normal (TF). **R. W. Ramette.** 885
Hydrogen isotope effects: An organic/physical laboratory experiment, Kinetic. **Patricia McGuiggan, Robert Elliason, Ben Anderson,** and **Beatrice Botch.** 718
Hydrolysis of salts, General approach for teaching. **Fernando Aquirre–Ode.** 957
Hysteresis and the laws of thermodynamics, Sorption. **William P. Bryan.** 209
Hysteresis in metal hydrides: An illustration of entropy production. **Ted B. Flanagan, C. N. Park,** and **D. H. Everett.** 944

I

Ideal gases: A persistent pitfall, Thermodynamics of "mixing" of (TF). **Edwin F. Meyer.** 676
Identification of inorganic salts (F&R). **Ronald I. Perkins.** 258
Images in chemistry. **Roberta W. Kleinman, Henry C. Griffin,** and **N. Konigsberg Kerner.** 766
In memoriam: John F. Baxter, Jr. (1909–1987). **George B. Kauffman.** 752
In memoriam: Robert C. Brasted. 301
In memoriam: Theodore Askounes–Ashford, distinguished educator. 487
Indian happiness wart in the development of photodynamic action. **Douglas C. Neckers.** 649
Indicating experience for students (CK). **Londa L. Borer.** 446
Indicators for solvent parameters, Metal complexes as color (LTE). **Y. Y. Lim, R. W. Soukup,** and **R. Schmid.** 904
Indigo plant as a teaching material. **Noboru Torimoto.** 332
Industrial application of recombinant DNA technology (CHEM I). **Michael D. Jones** and **Jeffrey T. Fayerman.** 337
Inert atmosphere, Versatile and inexpensive screw-cap vessels for medium pressure reactions and processes run under. **Mikael Begtrup.** 974
Infrared analysis using tissue paper. **Noel L. Owen** and **Steven G. Wood.** 976
Infrared region of the electromagnetic spectrum, Spectroscopic analysis using the near-. **Elbert W. Crandall.** 466
Infrared salt plate cleaning device. **Gene A. Hiegel.** 261
Infrared spectrophotometry: A physical chemistry experiment, The kinetics of $Mo(CO)_6$ substitution monitored by Fourier transform. **Kenneth S. Suslick, Edward B. Flint,** and **James A. Jensen.** 547
Infrared spectroscopy, Fourier transform (TICI). **W. D. Perkins.** A296
Part II. Advantages of FT-IR. A269
Part III. Applications. A306

Inorganic chemistry
Acid rain effects on stone monuments (CHEM I). 436
Acidity scale for binary oxides. 480
Alfred Werner's overlooked opportunity. 604
Allotropes and polymorphs. 404
An illustration of pure T_d symmetry in the solid state. 456
Apparatus for constant NH_3 addition. 365
Approximation of spherical polyatomic thermochemical radii of general formula MX_n^{z-}. 942
Arsenic–arsenic double bond revisited. 407
Chlorofluorocarbons and stratospheric ozone. 387
Color classification of coordination compounds. 1001
"Correct" methods for naming inorganic compounds (LTE). 901
Crude iodine production processes (TS). 152
Demonstration of high T_c superconductive powder. 853
Demonstration of induction by iron(II) of the oxidation of iodide by dichromate (TD). 444
Electronic spectra of cis and trans disubstituted octahedral chromium(III) complexes. 461
Error in the d^5 Tanabe–Sugano diagram (TF). 918
Experiment on organometallic chemistry of molybdenum. 265
FTIR rotational spectroscopy. 921
How soft is mercury (LTE)? 470
Hydroformylation of 1-hexene utilizing homogeneous rhodium catalysts: Regioselectivity as a function of conversion. 928
Hysteresis in metal hydrides. 944
Interpretation of electronic spectra of oxovanadium(IV), VO^{2+}, complexes (LTE). 288
Iodine spectrum revisited. 919
Is thioacetamide a serious health hazard in inorganic chemistry laboratories (SAFETY)? A144
Levitating a magnet using a superconductive material. 851
Lewis structures for compounds with expanded octets. 403
Ligand replacement at a square planar metal center: A kinetic experiment for the inorganic chemistry laboratory. 262
Naming inorganic compounds (LTE). 900
Passivation of copper in acid medium. 459
Preparation of lead compounds: An exercise in applied chemistry. 811
Preparation, iodometric analysis, and classroom demonstration of superconductivity in $YBa_2Cu_3O_{8-x}$. 847
Recent advances in the concept of hard and soft acids and bases. 561
Reception of Kasimir Fajan's quanticule theory of the chemical bond: A tragedy of a scientist. 122
Reexamining the diagonal relationships. 686
Stability ruler for metal io. complexes. 402
Stable organic oxidants: Paradox or possibility (SAFETY)? A43
Structural theories applied to taste chemistry. 1003
Superconductors. 836
Synthesis of DCl and $HCl-^{36}Cl$. 366
Teaching the concepts of metallurgy through the use of postage stamps (STAMP). 526
The structure of the water molecule: What should we tell the students? 124
Three theories of superconductivity. 842
Undergraduate experiment showing use of metal carbenes as homogeneous catalysts. 183
Use of fluoromethanes in organic synthesis. 143
Werner and Jorgensen: Presenting history with a computer (CS). 688

Inorganic chemistry: A possible response, Descriptive. **Fred H. Walters.** 540
Inorganic fireflies: A chemiluminescent clock reaction (TD). **Peter Jones, Jane E. Frew,** and **Nina Schowen.** 70
Inorganic salts, Identification of F&R. **Ronald I. Perkins.** 258

Insights, edited by **Donna Bogner**
A new method to balance chemical equations. **Arcesio Garcia.** 247
An aqueous problem with an interesting solution. **Nicholas C. Thomas.** 611
Dozen, Gross, nerds, moles, and sons. **Alton J. Banks.** 956
Hard ways and easy ways. **Lowell M. Schwartz.** 698
K_{sp} determination of calcium sulfate. **David Masterman.** 408
Making sense of the nomenclature of the oxyacids and their salts. **Glen E. Rodger, Harold M. State,** and **Richard L. Bivens.** 409
The disappearing act: Teaching students to expect the unexpected. **Cary Kilner.** 155
Instrumental analysis course, Using electronic laboratory notebook software in the (CS). **Michael F. Delaney.** 29
Instrumental analysis, Simplex optimization: A computer program for (CS). **James P. Deavor.** 792
Instrumentation center at Western Illinois University, Establishment of a regional high school. **Donald M. Baird** and **Janos Szamosi.** 1051

Insulating applications, Plastic materials for. **S. F. Wang** and **S. J. Grossman.** 39
Integrator/recorder for improved NMR integration, Add-on computing. **Alexander hatzis** and **Robert Rothchild.** 468
Intensities of spin–spin splitting lines of equivalent nuclei in NMR spectra, A straightforward way to determine relative. **Ronald H. Orcutt.** 763
Intensive drying: Anomaly and the chemical community. **Harold Goldwhite.** 657
Introduction to the interpretation of electron spin resonance spectra of organic radicals. **Nigel J. Bunce.** 907

Inventory control, edited by **Dennis Sievers**
A commercially available electronic device for conductivity experiments. **Frank J. Gadek.** 281
A simple, low-cost programmer for a temperature controller. **H. R. Alzabet** and **J. A. Barbero.** 380
An inexpensive device for producing, measuring, and moving gas. **Richard Wojt.** 1052
Easily made electronic device for conductivity experiments. **Frank J. Gadek.** 628

Iodine: a physical chemistry laboratory experiment, Determination of the heat of sublimation of. **Richard W. Schwenz.** 551
Iodine–azide reaction: A videotaped experiment, Kinetics and mechanism of the. **Gilbert P. Haight** and **Loretta L. Jones.** 271
Iodine production processes, Crude (TS). **Phyllis A. Lyday.** 152
Iodine spectrum revisited. **R. B. Snadden.** 919
Iodine to alkenes: A pseudo-first-, second-, or third-order kinetics experiment, Addition of. **Kurt W. Field, Deborah Wilder, Arthur Utz,** and **Kenneth E. Kolb.** 269
Iodometric analysis, and classroom demonstration of superconductivity in $YBa_2Cu_3O_{8-x}$, Preparation. **Daniel C. Harris, Marian E. Hills,** and **Terrell A. Hewston.** 847
Ion-selective electrode, Estimating the equilibrium voltage of an. **On-Kok Chang.** 91
IR and GC approach, Plasticizers in PVC: A combined. **W. H. Chan.** 897
IR windows using Tupperware seals and polyethylene coffee can lids, Inexpensive low-frequency. **Vinita C. Dew.** 975
Iron(III) chelates, An application of the NMR method for determination of magnetic moments to study anomalous paramagnetism in some. **Jeffrey G. Hughes** and **Peter J. Lawson.** 973
Iron in a bar of soap, Determination of. **M. A. Grompone.** 1057
Iron(II) of the oxidation of iodide by dichromate, Induction by (TD). **William L. Jolly.** 444
Iron(II) oxide (TD). **Clifford D. Miller.** 545
Isolation, Chemical. **Manus Monroe.** 835
Isotope effects: An organic/physical laboratory experiment, Kinetic hydrogen. **Patricia McGuiggan, Robert Eliason, Ben Anderson,** and **Beatrice Botch.** 718

J

Jorgensen: Presenting history with a computer, Werner and (CS). **David M. Whisnant.** 688

K

Kekule's dream: The discovery of the chemical transmission of nerve impulses by Otto Loewi, An overlooked parallel to. **Ulrich Weiss** and **Ronald A. Brown.** 770

Kinetics
Addition of iodine to alkenes: A pseudo-first-, second-, or third-order kinetics experiment. 269
Another auto analogy: Rate-determining steps (AA). 486
Autocatalytic activation of trypsinogen by trypsin. 83
Cola clock: A new flavor to an old classic (TD). 445
Comment on the equilibrum assumption in chemical kinetics (CC). 1002
Computer exercise in chemical reaction engineering and applied kinetics (CS). 876
Computer-assisted analysis of reaction rate data (CS). 878
Kinetic hydrogen isotope effects: An organic/physical laboratory experiment. 718
Kinetic rate law for autocatalytic reactions. 925
Kinetics and mechanism of the iodine–azide reaction: A videotaped experiment. 271
Kinetics of $Mo(CO)_6$ substitution monitored by Fourier transform infrared spectrophotometry: Physical chemistry experiment. 547
Kinetics of oxidation of bromcresol green. 81
Ligand replacement at a square planar metal center: A kinetic experiment for the inorganic chemistry laboratory. 262
Microcomputer-controlled experiment on chemical oscillation (CS). 1017
Numerical solutions of kinetic equations on a spreadsheet (CS). 496
Reversible activators of enzymes (CB). 1031
Rival equation rates (LTE). 286
Three-dimensional computer animation of a potential energy surface (CS). 495

Kirkwood–Frohlich statistical theory, Dielectric behavior of associated liquids and mixtures according to the. **H. G. Lohmannsroben.** 679

L

Lab: A cyanide incident case study, Hazards in a photography (SAFETY). **Cliff Houk** and **Charles Hart,** A234
Lab reports, Writing across the curriculum: Chemistry. **Lois C. Rosenthal.** 996
Lab?, What goes on in students' heads in (SYMP). **Miles Pickering.** 521
Laboratories, Is thioacetamide a serious health hazard in inorganic chemistry (SAFETY). **Hannu Elo.** A144
Laboratories, Methyl isocyanate in student (LTE). **Ruiess Van Fossen Bravo.** 820
Laboratories, OSHA standards for (SAFETY). **Kenyon D. Yoder.** A104
Laboratories, Self audits of hazardous waste operations in (SAFETY). **Kenneth E. Fischer.** A207
Laboratory, Application of expert systems in the general chemistry (CS). **Frank A. Settle, Jr.** 340
Laboratory application of the vortex tube. **Thomas J. Bruno.** 987
Laboratory data, Immediate recording and prompt tabulation of student (CS). **Vernon R. Miller.** 793
Laboratory exercises, Problem-solving. **Harold Wilson.** 985

Laboratory experiments
Aldol condensation experiment using a number of aldehydes and ketones. 367
Analysis of aspartame by TLC. 1065
Analysis of vitamin C by high-pressure liquid chromatography. 187
Analysis of xylene mixtures using binuclear lanthanide(III)–silver(I) NMR shift reagents. 979
Anodic polarography of cyanide in foodstuffs. 635
Application of the NMR method for determination of magnetic moments to study anomalous paramagnetism in some iron(III) chelates. 973
Atomic and molecular spectra using Polaroid films. 453
Autocatalytic activation of trypsinogen by trypsin. 83
Beer's law illustrated through attenuation of gamma rays in binary compounds. 172
Binary liquid–solid phase diagram of naphthalene-*p*-dichlorobenzene. 267
Buffer capacity. 817
Characterizing a tetrahedral intermediate in an acyl transfer reaction: An undergraduate ^1H NMR demonstration. 725
Chemical modification of catalytically essential amino acid residues in enzymes. 77
Chiral shift reagent analysis of enantioselectivity in baker's yeast reductions of ethylacetoacetate: An NMR experiment. 985
Colorimetric titration experiment with laser excitation and computer-interfaced endpoint detection (CS). 1019
Concerning dehydration of 2-methycyclohexanol. 273
Cyclic voltammetry experiment using a mercury electrode. 189
Determination of Henry's law constant for carbon dioxide. 260
Determination of impurities in whiskey using internal standard techniques. 1055
Determination of methanol in gasoline by gas chromatography. 1059
Determination of the heat of sublimation of iodine. 551
Determination of the specific surface area of solids by means of adsorption data. 175
Determining the two fundamental gas constants. 999
Device to demonstrate the principles of photometry and three experiments for its use. 630
Effect of pH and chloride ion concentration on the mobilities of various cations in soil. 448
Electroantennography cell for testing the activity of pheromones. 356
Electronic spectra of cis and trans disubstituted octahedral chromium(III) complexes. 461
Electrophoretic analysis of DNA restriction fragments. 274
Elimination of carbon tetrachloride from two common experiments. 544
Entropy of dissolution of urea. 723
Example of a constant-rate reaction (F&R). 534
Expanded polystyrene. 810
Experiment suing a nephelo-turbidity meter. 729
Extraction procedure for the determination of lead in gasoline by atomic absorption spectrometry. 188
Far ultraviolet emission of a helium discharge source studied by photoelectron spectroscopy. 463
Faradaic impedance diagrams: A computer electrochemical experiment (CS). 792
Gel electrophoresis in a covered butter dish. 279
Generation of cyclopentadiene. 726
Guided inquiry format to teach stoichiometry. 452
Hands-on introduction to chemistry for gifted students in the intermediate grades (CK). 537
Heat of dimerization of formic acid by FTIR. 88
Heat of vaporization of nitrogen. 1060
Hemoglobinometry experiment that uses transition metal chemistry (F&R). 354
Identification of inorganic salts (F&R). 258
Improved preparation of a Grignard reagent. 179
Infrared analysis using tissue paper. 976
Introducing the Fourbaix diagram for cobalt (F&R). 165
Iodine spectrum revisited. 919

Kinetic hydrogen isotope effects: An organic/physical laboratory experiment. 718
Kinetic study. 269
Kinetics and mechanism of the iodine–azide reaction: A videotaped experiment. 271
Kinetics of oxidation of bromcresol green. 81
Kinetics of $Mo(CO)_6$ substitution monitored by Fourier transform infrared spectrophotometry. 547
K_{sp} determination of calcium sulfate (INS). 408
Lewis acid catalysis of a Diels–Alder cycloaddition. 642
Ligand replacement at a square planar metal center: A kinetic experiment for the inorganic chemistry laboratory. 262
Method for determining sulfate in acid rain (F&R). 449
Method of generating bromine for qualitative analysis. 368
Methods for preparing aqueous solutions of chlorine and bromine for halogen displacement reactions. 156
Microcomputer-controlled experiment on chemical oscillation (CS). 1017
Mohr's salt as a wide-coverage testing material for analytical chemistry courses. 955
Multinuclear NMR project. 177
Olfactory delights. 799
Organometallic chemistry of molybdenum. 265
Passivation of copper in acid medium. 459
Percent oxygen in air (F&R). 809
Plasticizers in PVC using a IR and GC approach. 897
Polymer-supported oxidation reactions: Two contrasting experiments for the undergraduate laboratory. 371
Preparation and reaction of 2,2'-bipyridinetetracarbonylmolybdenum(0). 637
Preparation of cyclopentadiene from its dimer. 898
Preparation of lead compounds: An exercise in applied chemistry. 811
Preparation, iodometric analysis, and classroom demonstration of superconductivity in $YBa_2Cu_3O_{8-x}$. 847
Preparative exercises in general chemistry (GB). 252
Problem involving organic qualitative analysis (F&R). 971
Project lab for an advanced general chemistry course featuring the amino acid, glycine. 899
Properties of nonideal binary solutions. 369
Reactions of lipolytic enzymes. 358
Ring-opening and ring-forming polymerizations. 639
Separation and identification of cinnamic acids by TLC. 182
Soil pH as a first experiment in quantitative analysis. 447
Synthesis of an amino acid derivative and spectroscopic monitoring of dipeptide formation. 966
Synthesis of aspartame. 1062
Synthesis of chrysanthemic ester, 1061
Synthesis of DCl and HCl-^{36}Cl. 366
Thermal analysis of decomposition of urea. 180
Thermodynamics of the rhodamine B lactone–zwitterion equilibrium. 262
Titrations using quaternary ammonium halides as precipitates (GB). 141
Tollens's test, fulminating silver, and silver fulminate (TF). 164
Undergraduate experiment showing use of metal carbenes as homogeneous catalysts. 183
Using the copper sulfide experiment to show the limits of theory (PO). 539
Variable-angle X-ray photoelectron spectroscopic determination of the thickness of the oxide layer on aluminum metal. 981
Vibrational spectra of MnO_4-isolated in KBr crystals. 456
Visual manifestation of the Norrish Type I reaction: The cyclohexanone sunburn dosimeter. 84
Voltammetric monitoring of Br^- and Br^{3-} concentrations during the bromination of styrene by Br^{3-}. 86
Laboratory HVAC systems: A Troika (SAFETY). **Earl A. Walls.** A314
Laboratory instruments: How to minimize noise interferences, Computer interfacing to (TICI). **Mary Karpinski.** A100
Laboratory notebook software in the instrumental analysis course, Using electronic (CS). **Michael F. Delaney.** 29
Laboratory practical examinations for general chemistry, Unusual. **Robert Silberman, Samuel Day, Peter Jeffers, Kent Klanderman, M. Gail Phillips,** and **Arden zipp.** 622
Laboratory program, Improved performance in qualitative analysis from incorporating some microscale techniques into a traditional organic. **Christina Noring Hammond** and **Michael J. Tremelling.** 440
Laboratory safety guidelines: 40 steps for a safer laboratory (ST). **James A. Kaufman.** 161
Laboratory, Safety in the physical chemistry (SAFETY). **Janos Szamosi.** A164
Laboratory, Student strategies in a junior-level procedureless. **Warren S. Warren** and **Miles Pickering.** 68
Laboratory, Use of commercial spreadsheet programs in the science (CS). **Jerome S. Levkov.** 31
Labs, Chemical wastes in academic (SAFETY). **Wendy A. Walton.** A69

Le Chatelier: Right or wrong (LTE)? **Gustavo Quintero B.** and **F. G. Heifferich.** 1069
Lead compounds: An exercise in applied chemistry, Preparation of. **Michael Laing, David Williams–Wynn,** and **Saroj Subramoney.** 811
Lead in gasoline by atomic absorption spectrometry, Extraction procedure for the determination of. **Ragnar Bye.** 188
Learners, Chemists as. **Leslie C. Smedley, Jr.** 321
Lecture demonstrations, An inexpensive linear thermistor thermometer for cryoscopic and calorimeter measurements and (CS). **James W. Beatty** and **Todd B. Colin.** 500

Lecture demonstrations (see also *Tested demonstrations* and *Overhead projector demonstrations*)
Carbon dioxide: Its principal properties displayed and discussed (BR). 167
Chemist-tree for National Chemistry Day. 747
Classroom demonstrations of polymer principles. 72, 886
Converting sunlight to mechanical energy: A polymer example of entropy. 889
Demonstration of high T_c superconductive powder. 853
Demonstration presented at 9th Biennial Chemical Education Conference. 103
Determination of Henry's law constant for carbon dioxide. 260
Easy demonstration of the visible spectrum using the Spectronic 20 (F&R). 627
Electrolysis omission (LTE). 92
Example of a constant-rate reaction (F&R). 534
Far from equilibrium: The continuous-flow bottle. 147
Far from equilibrium: The flashback oscillator. 1043
Introduction to overhead projector demonstrations (OP). 348
Kinetics and mechanism of the iodine–azide reaction on videotape. 271
Levitating a magnet using a superconductive material. 851
Methods for preparing aqueous solutions of chlorine and bromine for halogen displacement reactions. 156
Molecular vibration demonstrations. 1025
Nuts and bolts approach to explain limiting reagents. 134
Pop-and-sniff experimentation: A high-sensory-impact teaching device (CK). 797
Preparation, iodometric analysis, and classroom demonstration of superconductivity in $YBa_2Cu_3O_{8-x}$. 847
Reversible oxygenation of oxygen transport proteins. 441
Rock candy in a cellophane bag: A demonstration of pervaporation. 804
Stretched elastomers. 42
The disappearing act: Teaching students to expect the unexpected (INS). 155
Two-dimensional working model of the neon electron configuration. 133

Lewis acid catalysis of a Diels–Alder cycloaddition: An undergraduate organic experiment. **Alan P. Marchand, V. Vidyasagar, Mark B. Buckner,** and **Philmore O. Holman.** 642
Lewis structures for compounds with expanded octets. **Charles J. Malerich.** 403
Ligand replacement at a square planar metal center: A kinetic experiment for the inorganic chemistry laboratory. **H. Kruger** and **D. J. A. de Waal.** 262
Limelight, Reacquaintance with the. **M. B. Hocking** and **M. L. Lambert.** 306
Limiting reagent problems, Solving (LTE). **Dean O. Skovlin.** 472
Limiting reagents, A nuts and bolts approach to explain. **Craig Blankenship.** 134
Linguistic method of solving verbal problems, Semantic. **Franklin R. Hoggard.** 49
Lipolytic enzymes: An undergraduate biochemistry experiment, Reactions of. **Kelly A. Clingman** and **Joseph Hajdu.** 358
Liquid transfer, A modified adapter for. **Richard A. Bunce** and **M. Wayne Adkins.** 728
Liquids, A controller of level of. **H. R. Alzabet** and **J. A. Barbero.** 727
Liquids, Modifications of some traditional demonstrations with (TD). **Brian Stedjee.** 984
Liquids, Simple experiment with unknown (OP). **Martin Sanchez.** 964
Literature for classrooms, Polymer. **Gerald S. Kirshenbaum.** 47
Loewi, An overlooked parallel to Kekule's dream: The discovery of the chemical transmission of nerve impulses by Otto. **Ulrich Weiss** and **Ronald E. Brown.** 770
Luther's 1902 discovery and analysis of chemical waves. **Kenneth Showalter** and **John J. Tyson.** 742

M

Macintosh computer, ChemPlate and Hopkins, A template and font for drawing molecular structures with the (CS). **Jih Ru Hwu, John M. Wetzel,** and **Jeffrey A. Robl.** 135
Magnet using a superconductive material, Levitating a. **Frederick H. Juergens, Arthur B. Ellis, Gunther H. Dieckmann,** and **Ronald J. Perkins.** 851
Magnetic iron filings, An analogy for soluble and insoluble mixtures: Sand and (AA). **Ira Batra Garde.** 154
Magnetic moments to study anomalous paramagnetism in some iron(III) chelates, An application of the NMR method for determination of. **Jeffrey G. Hughes** and **Peter J. Lawson.** 973

Major for liberal arts and science degrees, A generalist chemistry. **Richard J. Bearman** and **Richard A. Russell.** 703
Marine transportation: A practical course, Hazardous materials in. **Thomas J. Haas** and **Jerzy J. Kichner.** 34
Markownikov's rule, The misuse of (TF). **Thomas A. Newton.** 531
Match: Free fall and fire. An introduction to physical thought, Playing with a (BR). **Henry A. Bent.** 1047

Math methods
Advances in acid–base Gran plot methodology. 947
Approximation of spherical polyatomic therochemical radii of general formula MX_n^{z-}. 942
Comments on partial derivatives in thermodynamics. 670
Enhance your spreadsheet capabilities: Frequency distribution plots and sorting (CS). 241
Facile calculations of the characteristic polynomial and π-energy levels of molecules using chemical graph theory. 213
Fourier transforms in data treatment (TICI). A296
Numerical algorithm technique for deriving Russell–Saunders (R–S) terms. 951
On a common graphical flaw in the carboxylic acid/alcohol relative acidity argument (TF). 416
Opportunities for reinforcement of learning among the subdisciplines of chemistry (LTE). 384
Proper use of the quadratic equation (TF). 1009
Slopes of straight lines when neither axis is error-free. 28
Solving limiting reagent problems (LTE). 472
Solving quadratic equations (LTE). 472
Statistical determination of normal modes. 425
Statistical evaluation of class data for two buret readings. 376
Use of commercial spreadsheet programs in the science laboratory (CS). 31

Mathematics and science program for gifted high school students: The chemistry connection. **Jay H. Worrell.** 612
Mechanical energy: A polymer example of entropy, Converting sunlight to. **Lon J. Mathias.** 889
Mercury?, How soft is (LTE). **Douglas S. Rustad.** 470
Mercury poisoning: Each generation needs to be told (ST). **Miriam C. Nagel.** 802
Metabolic questions (EQE). **Hugh A. Akers.** 159
Metabolism of xenobiotic chemicals. **John W. Cullen.** 396
Metal complexes as color indicators for solvent parameters (LTE). **Y. Y. Lim.** 904
Metal hydrides: An illustration of entropy production, Hysteresis in. **Ted B. Flanagan, C. N. Park,** and **D. H. Everett.** 944
Metal ion complexes, Stability ruler for. **R. Bruce Martin.** 402
Metallurgy through the use of postage stamps, Teaching the concepts of (STAMP). **Daniel Bartet P.** and **Eugenia Aguila G.** 526
Metals, Redox demonstrations and descrptive chemistry: Part I (TD). **Charles E. Ophardt.** 716
Methane pistol (TD). **James F. Skinner.** 171
Methanol in gasoline by gas chromatography: A laboratory experiment, Determination of. **Stanford L. Tackett.** 1059
Method for determining R and S for Fischer projections, An astonishingly easy. **Ben Ruekberg.** 1034
Methods for preparing aqueous solutions of chlorine and bromine for halogen displacement reactions. **Gene A. Hiegel, Miguel H. Abdala, S. Vincent Burke,** and **Donald P. Beard.** 156
Methyl isocyanate in student laboratories (LTE). **Ruiess Van Fossen Bravo.** 820
Methylases: Electrophoretic analysis of DNA restriction fragments, Action of endonucleases and. **Kotaro J. Kaneko, John M. Burke,** and **Lawrence J. Kaplan.** 274
Mettler 440 balance interface, Commodore microcomputer (CS). **Harvey F. Blanck.** 240
Microcomputer, Ab initio calculations on a (CS). **Lynne H. Reed** and **Arthur R. Murphy.** 789
Microcomputer-controlled experiment, Chemical oscillations: A (CS). **Patricia Aroca, Jr.** and **Ricardo Aroca.** 1017
Microcomputers and chemical education: A compilation of references (CS). **James A. Wood.** 501
Microscale techniques into a traditional organic laboratory program, Improved performance in qualitative analysis from incorporating some. **Christina Noring Hammond** and **Michael J. Tremelling.** 440
Minimum of the Gibbs free energy involved in chemical equilibrium: Some further comments on the stability of the system, On the. **M. Deumie, B. Boulil,** and **O. Henri-Rousseau.** 201
Misuse of Markownikov's rule, The (TF). **Thomas A. Newton.** 531
Mixtures: Sand and magnetic iron filings, An analogy for soluble and insoluble (AA). **Ira Batra Garde.** 154
Mnemonic diagrams for thermodynamic systems. **James M. Phillips.** 674
MO theory and electron spin resonance in the spectroscopy course, Huckel (CS). **Ronald D. McKelvey.** 497
Model for every student, DNA. **Antony C. Wilbraham.** 806
Model for studying solution thermodynamics, A tractable. **Carl W. David.** 484
Model of a coordination polyhedron that represents the cubic closest-packed structure, An easily constructed. **Shukichi Yamana.** 1040
Model of a coordination polyhedron that represents the hexagonal closest-packed structure, An easily constructed. **Shukichi Yamana.** 1033
Model of the neon electron configuration, A two-dimensional working. **Clark E. Bricker.** 133
Model of twin cubes having a common line (or plane), An easily constructed. **Shukichi Yamana.** 761
Models and the Macintosh, Stereographic images using Dreiding. **Michael J. Strauss** and **Gordon Gribble.** 850
Models for the S_N2 mechanism, Two working. **Martin M. Anderson.** 1023
Models, The mounting of stereo slides for projecting molecular. **H. J. G. Hayman.** 1041
Modes, Statistical determination of normal. **John F. Geldard** and **Lawrence R. Pratt.** 425
Mohr's salt as a wide-coverage testing material for analytical chemistry courses. **Yoshiki Moriguchi.** 955
Molar and equivalent amounts and concentrations. **Truman P. Kohman.** 246
Mole fraction revisited (EQE). **A. Mancott.** 320
Mole?, Should we teach the (LTE). **George Gorin.** 192
Molecular motions in polyatomic molecules, A novel pictorial approach to teaching. **John G. Verkade.** 411
Molecular orbital calculations using the simple Huckel method (CS). **Jonathan H. Reeder.** 499
Molecular spectra using Polaroid films: A physical chemistry experiment, Atomic and. **Manit Rappon** and **John M. Greer.** 453
Molecular structure and chirality. **David J. Brand** and **Jed Fisher.** 1035
Molecular structure and molecular mass, Classroom demonstrations of polymer principles: Part I. **F. Rodriguez, L. J. Mathias, J. Kroschwitz,** and **C. E. Carraher, Jr.** 72
Molecular structure: Property relationships. **Paul G. Seybold, Michael May,** and **Ujjvala A. Bagal.** 575
Molecular structures with the Macintosh computer, ChemPlate and Hopkins, A template and font for drawing (CS). **Jih Ru Hwu, John M. Wetzel,** and **Jeffrey A. Robl.** 135
Molecular vibration demonstrations. **George Turrell** and **Robert Demol.** 1025
Molecular vibrations, A student introduction to. **Anthony R. Lacey.** 756
Molecular weight averages and distributions, Visualizing. **Ferdinand Rodriguez,** 488
Molecular weights come of age (EQE). **J. Tietjen.** 401
Molecular weights of 2,4-dinitrophenylhydrazones and dicarboxylic acids, Quantitative application of thin-layer chromatography in the analysis of organic compounds: Determining the (GB). **Vincenzo Giuliano** and **John Paul Rieck.** 625
Molecular weights revisited, Musical (TD). **Frederick B. Augustine.** 1053
Moles, and sons, Dozen, gross, nerds (INS). **Alton J. Banks.** 956
Molybdenum, Organometallic chemistry of. **C. Robert Lucas** and **Kelly A. Walsh.** 265
Musical molecular weights revisited (TD). **Frederick B. Augustine.** 1053
Mutagens and carcinogens in air, Ames testing for. **Peter Flessel, Yi Y. Wang, Kuo-In Chang,** and **Jerome J. Wesolowski.** 391

N

Name that compound, Part II (EQE). **A. Mancott.** 159
Names for H_2O, The many chemical. **Richard S. Treptow.** 697
Name's the game in problem solving, The. **Janet N. Ryan.** 524
Naming inorganic compounds (LTE). **Robert J. Lancashire.** 901
Naming inorganic compounds, "Correct" methods for (LTE). **W. Conard Fernelius.** 903
Naphthalene-*p*-dichlorobenzene: A physical chemistry laboratory experiment, Binary liquid–solid phase diagram of. **Paul P. Blanchette.** 267
NASA and the space program to help high school and college students learn chemistry, Using. **Paul B. Kelter, William E. Snyder,** and **Constance S. Buchar.**
Part I. The shuttle and our living earth. 60
Part II. The current state of chemistry in the space program. 228
Natural products, Ethnobotany: The chemist's source for the identification of useful natural products. **Denise M. Hosler** and **Michael A. Mikita.** 328
Neo-Piagetian theory of Pascual–Leone, Relation between M-space of students and M-demand of different items of general chemistry and its interpretation based upon the. **Mansoor Niaz.** 502
Nephelo-turbidity meter, A low-cost laboratory experiment using a. **Ishwar Das, S. S. Das,** and **Anal Pushkarna.** 729
Nernst and the last law, Walther. **William H. Cropper.** 3
Nerve impulses by Otto Loewi, An overlooked parallel to Kekule's dream: The discovery of the chemical transmission of. **Ulrich Weiss** and **Ronald A. Brown.** 770
Neurochemicals in vivo, Approaches to voltammetric and chromatographic monitoring of (TICI). **Alice J. Cunningham** and **Joseph B. Justice, Jr.** A34

New approach to an old experiment (PO). **Peter J. Hansen.** 539
New road to reactions. **Wobbe de Vos** and **Adri H. Verdonk.**
Part 4. The substance and its molecules. 692
Part 5. The elements and their atoms. 1010
Next time...I hope, The (LTE). **Ralph Barnhard.** 558
Nickels, Activation analysis of. **Jack C. Norman** and **David S. Blinstrub.** 254
Nitrogen, Heat of vaporization of. **Peter Hamlet.** 1060
NMR analysis, A new microcell technique for. **Sophia J. Yu.** 812
NMR chemical shifts: The BS method, A very brief, rapid, simple, and unified method for estimating carbon-13. **Ben Shoulders** and **Steven C. Welch.** 915
NMR coupling patterns, Use of Pascal-like triangles in describing first-order. **Timothy D. Lash** and **Susan Shirkey Lash.** 315
NMR demonstration, Characterizing a tetrahedral intermediate in an acyl transfer reaction: An undergraduate ^{1}H. **Henry S. Rzepa, Ana M. Lobo, M. Matilde Marques,** and **Sundaresan Prabhakar.** 725
NMR experiment, Chiral shift reagent analysis of enantioselectivity in baker's yeast reductions of ethylacetoacetate: An. **K. B. Lipkowitz** and **J. L. Mooney.** 985
NMR integration, Add-on computing integrator/recorder for improved. **Alexander Hatzis** and **Robert Rothchild.** 468
NMR method for determination of magnetic moments to study anomalous paramagnetism in some iron(III) chelates, An application of the. **Jeffrey G. Hughes** and **Peter J. Lawson.** 973
NMR paramagnetic shift reagents, Discovery of (CHS). **Jasper A. Jackson.** 140
NMR project, The structure of bis(trimethylsilyl) amides: A multinuclear. **Marjorie S. Samples, Claude H. Yoder,** and **Charles D. Schaeffer, Jr.** 177
NMR shift reagents, Analysis of xylene mixtures using binuclear lanthanide(III)–silver(I). **Thomas J. Wenzel** and **Mark D. Russett.** 979
NMR spectra, A straightforward way to determine relative intensities of spin–spin splitting lines of equivalent nuclei in. **Ronald H. Orcutt.** 763
NMR spectroscopy: A simple undergraduate experiment, Solvent effects in ^{1}H. **Jose A. S. Cavaleiro.** 549
Noise interferences, Computer interfacing to laboratory instruments: How to minimize (TICI). **Mary Karpinski.** A100
Nomenclature: Emergence, evolution, emphases, and errors, The official rules for organic chemical (TS). **James G. Traynham.** 325
Nomenclature of relative stereochemistry: Choosing between likes and preferences. **Michael A. Brook.** 218
Nomenclature of the oxyacids and their salts, Making sense of the (INS). **Glen E. Rodgers, Harold M. State,** and **Richard L. Bivens.** 409
Nomenclature—or what's in a name?, Polymer. **Charles E. Carraher, Jr., George Hess,** and **L. H. Sperling.** 36
Nonideal binary solutions: An integrated physical chemistry experiment, Properties of. **David B. Marshall, J. L. McHale, Suzanne Carswell,** and **David Erne.** 369
Nonleaded gasoline: Its impact on the chemical industry (IND). **Harold Wittcoff.** 773
Normal hydrogen electrode, Outmoded terminology: The (TF). **R. W. Ramette.** 885
Normal modes, Statistical determination of. **John F. Geldard** and **Lawrence R. Pratt.** 425
Norrish Type I reaction: The cyclohexanone sunburn dosimeter, Visual manifestation of the. **Felix A. Carrol, Geoffrey F. Strouse,** and **Jon M. Hain.** 84
Numerical technique in chemistry: The quadratic equation, Good (TF). **H. Bradford Thompson.** 1009
Nuts and bolts approach to expla... limiting reagents. **Craig Blankenship.** 434

O

Observation and the teaching of science. **James H. Swinehart.** 429
Octets, Lewis structures for compounds with expanded. **Charles J. Malerich.** 403
Oil and water do not mix, When (OP). **Gary L. Trammell.** 1022
Olfactory delights. **Marilyn C. Sbrollini.** 799
Opportunities for reinforcement of learning among the subdisciplines of chemistry (LTE). **Gavril Niac.** 384

Organic chemistry
Aldol condensation experiment using a number of aldehydes and ketones. 367
Analysis of aspartame by TLC. 1065
Analysis of xylene mixtures using binuclear lanthanide(III)–silver(I) NMR shift reagents. 979
Apparatus for constant NH_3 addition. 365
Arsenic–arsenic double bond revisited. 407
Biography of Elliot Ritchie Alexander, Jr. (CHS). 882
Carbonium versus carbocation in nomenclature (LTE). 92
Characterizing a tetrahedral intermediate in an acyl transfer reaction: An undergraduate ^{1}H NMR demonstration. 725
Chemistry in the dyeing of eggs. 291
Chemistry of postage stamps: Dyes, phosphors, adhesives (STAMPS). 195
Chiral shift reagent analysis of enantioselectivity in baker's yeast reductins of ethylacetoacetate. 985
Computer program for allocation of organic qualitative analysis unknowns (CS). 239
Computer program for synthesis exercises (CS). 238
Concerning dehydration of 2-methylcyclohexanol. 273
Configurations of glucose and other aldoses. 15
Counting halomethanes (EQE). 678
Cyclopeptide alkaloids. 21
Decarboxylation of α-keto acids. 591
Drawing enantiomers the easy way. 1042
Estimating carbon-13 NMR chemical shifts. 915
Ethnobotany: The chemist's source for the identification of useful natural products. 328
Exam question on stereoisomerism (EQE). 533
Experiment on organometallic chemistry of molybdenum. 265
Facile calculations of the characteristic polynomial and π-energy levels of molecules using chemical graph theory. 213
Generation of cyclopentadiene. 726
Genetic engineering. 854
Huckel MO theory and electron spin resonance in the spectroscopy course (CS). 497
Hydroformylation of 1-hexene utilizing homogeneous rhodium catalysts: Regioselectivity as a function of conversion. 928
Improved performance in qualitative analysis from incorporating some microscale techniques into a traditional organic laboratory program. 440
Improved preparation of a Grignard reagent. 179
Indian happiness wart in the development of photodynamic action. 649
Indigo plant as a teaching material. 332
Introduction to the interpretation of electron spin resonance spectra of organic radicals. 907
Kinetic hydrogen isotope effects: An organic/physical laboratory experiment. 718
Laboratory steam distillation using electrically generated superheated steam. 373
Lewis acid catalysis of a Diels–Alder cycloaddition. 642
Method for crystallization of thermally unstable or highly soluble compounds. 813
Method for determining R and S for Fischer projections. 1034
Microscale lab as reported at 9th Biennial Chemical Education Conference. 100
Molecular orbital calculations using the simple Huckel method (CS). 499
Molecular structure and chirality. 1035
Molecular structure: Property relationships. 575
Nomenclature of relativd stereochemistry: Choosing between likes and preferences. 218
Nonleaded gasoline: Its impact on the chemical industry (IND). 773
Official rules for organic chemical nomenclature: Emergence, evolution, emphases, and errors (TS). 325
On a common graphical flaw in the carboxylic acid/alcohol relative acidity argument (TF). 416
Polymer-supported oxidation reactions: Two contrasting experiments for the undergraduate laboratory. 371
Preparation and reaction of 2,2'-bipyridinetetracarbonylmolybdenum(O). 637
Preparation of cyclopentadiene from its dimer. 898
Problem involving organic qualitative analysis (F&R). 971
Pyroolizidine alkaloids: Testing for toxic constituents of confrey. 1027
Quantitative application of thin-layer chromatography in the analysis of organic compounds (GB). 625
Quiz on stereochemistry. 1015
Reactivity selectivity principle: Should it ever be used? 475
Recent advances in the concept of hard and soft acids and bases. 561
Ring-opening and ring-forming polymerizations. 639
Specrroscopic analysis using the near-infrared region of the electromagnetic spectrum. 466
Stable organic oxidants: Paradox or possibility (SAFETY)? A43
Stereoelectronic effects, tau bonds, and Cram's rule. 587
Stereographic images using Dreiding models and the Macintosh. 850
Structural theories applies to taste chemistry. 1003
Suspected carcinogen (LTE). 191
Synthesis of an amino acid derivative and spectroscopic monitoring of dipeptide formation. 966
Synthesis of aspartame. 1062
Synthesis of chrysanthemic ester. 1061
Synthesis of DCl and HCl-^{36}Cl. 366
Tale of two sweeteners (TS). 954
The misuse of Markownikov's rule (TF). 531
Thioxanthone sulfone radical anion: A relatively stable ketyl (TD). 352
Three views on assigning absolute configurations (LTE). 731, 732
Tollen's test, fulminating silver, and silver fulminate (TF). 164
Two working models for the S_N2 mechanism. 1023
Undergraduate experiment showing use of metal carbenes as homogeneous catalysts. 183
Use of fluoromethanes in organic synthesis. 143
Use of polar maps in conformational analysis. 568
Using a Sherlock Holmes story to teach organic concepts. 1014
Using sequencing questions in chemistry examinations (EQE). 532
Visual manifestation of the Norrish Type I reaction: The cyclohexanone sunburn dosimeter. 84
Wartime research on RDX (CHS). 599
When oil and water do not mix (OP). 1022

Organometallic chemistry of molybdenum. **C. Robert Lucas** and **Kelly A. Walsh.** 265

Organometallic photochemistry, Preparation and reaction of 2,2′-bipyridinetetracarbonylmolybdenum(0): An experiment in. **David M. Manuta** and **Alistair L. Lees.** 637
Origin of the term quantum (LTE). **George B. Kauffman.** 383
Oscillations: A microcomputer-controlled experiment, Chemical (CS). **Patricia Aroca, Jr.** and **Ricardo Aroca.** 1017
Oscillations, Coupled (TD). **D. P. Onwood.** 351
Oscillator, Far from equilibrium: The flashback. **Leonard J. Soltzberg, Michele M. Boucher, Dawn M. Cane,** and **Stacey S. Pazar.** 1043
OSHA standards for laboratories (SAFETY). **Kenyon D. Yoder.** A104
Oven drying of volumetric glassware. **David R. Burfield** and **Glenn Hefter.** 1054

Overhead projector demonstrations, edited by **Doris Kolb**
A free plastic spot plate for overhead demonstrations. **Carol Goodgame Marsh.** 964
Electrochemistry demonstrations with an overhead projector. **Charles R. Ward** and **Thomas J. Greenbowe.** 1021
Introduction to overhead projector demonstratins. **Doris Kolb.** 348
More electrolysis experiments for the overhead projector. **Kenneth E. Kolb.** 891
pH measurements on the overhead projector. **Sally Solomon** and **Nancy High.** 964
Physical and chemical properties. **Erwin Boschmann.** 891
Simple experiment with unknown liquids. **Martin Sanchez.** 964
Some ideas from the past. 805
When oil and water do not mix. **Gary L. Trammell.** 1022

Overlooked parallel to Kekule's dream: The discovery of the chemical transmission of nerve impulses by Otto Loewi. **Ulrich Weiss** and **Ronald A. Brown.** 770
Oxidants: Paradox or possibility?, Stable organic (SAFETY). **Leslie Bretherick.** A43
Oxidation of bromcresol green, Kinetics of. **Miles Pickering** and **David Heiler.** 81
Oxidation reactions: Two contrasting experiments for the undergraduate laboratory, Polymer-supported. **Alan J. Buglass** and **John S. Waterhouse.** 371
Oxide layer on aluminum metal: An advanced undergraduate laboratory experiment, Variable-angle X-ray photoelectron spectroscopic determination of the thickness of the. **David E. King** and **W. E. Swartz, Jr.** 981
Oxides, An acidity scale for binary. **Derek W. Smith.** 480
Oxyacids and their salts, Making sense of the nomenclature of the (INS). **Glen E. Rodgers, Harold M. State,** and **Richard L. Bivens.** 409
Oxygen in air, Percent (F&R). **George F. Martins.** 809
Oxygenation of oxygen transport proteins, Reversible. **C. M. Drain** and **Barry B. Corden.** 441
Ozone, Chlorofluorocarbons and stratospheric. **Scott Elliott** and **F. S. Rowland.** 387

P

Parallels between adolescents' conception of gases and the history of chemistry. **Carlos J. Furio Mas, Juan Hernandez Perez,** and **Harold H. Harris.** 616
Paramagnetic shift reagents, Discovery of NMR (CHS). **Jasper A. Jackson.** 140
Partial derivatives in thermodynamics, Some comments on. **E. W. Anacker, Steven E. Anacker,** and **William J. Swartz.** 670
Particle in an equiliteral triangle: Exact solution of a nonseparable problem. **Wai-Kee Li** and **S. M. Blinder.** 130
Particulate nature of matter, Understanding the. **Dorothy L. Gabel, K. V. Samuel,** and **Diana Hunn.** 695
Pascal-like triangles in describing first-order NMR coupling patterns, Use of. **Timothy D. Lash** and **Susan Shirkey Lash.** 315
Passivation of copper in acid medium. **C. Alonso** and **P. Ocon.** 459
Periodic table: Getting to the bottom of it, Upward view. **William B. Guenther.** 9
Periodic table of elements: Concerns of a high school chemistry teachers, The new format for the (LTE). **C. V. Krishnan.** 558
Periodic table, Simple postage stamp (STAMP). **Ll. Garrios, F. Ferrando,** and **R. Miralles.** 682
Permanganate in alkaline conditions: A lecture demonstration, The stepwise reduction of (TD). **Peter Ruoff.** 624
Permission (LTE). **Rubin Battino.** 903
Personalized instruction, Physical chemistry at USAFA. **Larry P. Davis, Donn M. Storch,** and **Larry D. Strawser.** 784
Pervaporation, Rock candy in a cellophane bag: A demonstration of. **Leon S. Ciereszko.** 804
Pet peeves and sacred cows, On (PO). **Jack L. Hedrick.** 614
pH measurements on the overhead projector (OP). **Sally Solomon** and **Nancy High.** 964
Phase diagram: A computer-controlled experiment, The tin/lead solid/liquid (CS). **Kathyrn R. Williams, John R. Eyler,** and **Samuel O. Colgate.** 499
Phase diagram of naphthalene-*p*-dichlorobenzene: A physical chemistry laboratory experiment, Binary liquid-solid. **Paul P. Blanchette.** 267
Phenylethoxycarbene tungsten pentacarbonyl and polymerizatoin of norbornene and phenylacetylene, An undergraduate experiment in homogeneous catalysis: Synthesis of **Dider Villemin.** 183
Pheromones, Selective electroantennography cell for testing the activity of. **Roberto Rozas** and **Dagor Perez.** 356
Philately, Alchemy and (STAMP). **Gerard A. van Albada** and **James O. Schreck.** 869

Philosophy of education
Chemist as teacher of history. 828
Concept learning versus problem solving. 508
Descriptive chemistry versus theoretical (PO)? 765
Descriptive chemistry (PO). 249
Evaluation of three instructional methods for teaching general chemistry. 794
Fostering question-asking capability as a way of problem solving. 510
Generic and harder problems: Teaching problem solving (SYMP). 516
How students imagine ideas. 766
Modified Piagetian theory applied to teaching. 502
Observation and the teaching of science. 429
Parallels between adolescents' conception of gases and the history of chemistry. 616
Requiring good writing in chemistry courses. 505
Role of algorithms in teaching problem solving (SYMP). 513
Should students always use algorithms to solve problems (SYMP)? 513
Solving chemistry problems without utilizing the factor-label approach (SYMP). 519
Status of undergraduate research: An update. 163
Textbooks containing too many crutches hinder student learning (PO). 884
The solution is not the problem (SYMP). 523
We analytical chemistry teachers don't get no respect (PO). 438
What goes on in students' heads in lab (SYMP)? 521

Photochemistry, Preparation and reaction of 2,2′-bipyridinetetracarbonylmolybdenum(0): An experiment in organometallic. **David M. Manuta** and **Alistair J. Lees.** 637
Photodynamic action, The Indian happiness wart in the development of. **Douglas C. Neckers.** 649
Photoelectron spectroscopy, The far ultraviolet emission of a helium discharge source studied by. **J. Barrie Peel** and **Ellak I. von Nagy-Felsobuki.** 463
Photography lab: A cyanide incident case study, Hazards in a (SAFETY). **Cliff Houk** and **Charles Hart.** A234
Photometry and three experiments for its use, A device to demonstrate the principles of. **R. Del Delumyea.** 630
Photosensitive system, Easily demonstrated (TD). **David O. Cooke.** 257
Photosynthesis and carbon dioxide fixation. **Muriel B. Bishop** and **Carl B. Bishop.** 302
Physical and chemical properties (OP). **Erwin Boschmann.** 891

Physical chemistry
Ab initio calculations on a microcomputer (CS). 789
Advances in rubber elasticity and characterization of elastomeric networks. 491
Apparatus for measuring dynamic surface tension. 378
Atomic and molecular spectra using Polaroid films. 453
Audio frequency measurements for heat capacity ratios using Apple II (CS). 788
Binary liquid–solid phase diagram of naphthalene-*p*-dichlorobenzene. 267
Chemists' delta (PO). 668
Comment on the equilibrium assumption in chemical kinetics (CC). 1002
Comments on partial derivatives in thermodynamics. 670
Computer exercise in chemical reaction engineering and applied kinetics (CS). 876
Computer-assisted analysis of reaction rate data (CS). 878
Converting sunlight to mechanical energy: A polymer example of entropy. 889
Correct equilibrium constants for water (LTE). 1067
Coupled oscillations (TD). 351
C_p/C_v ratios by the sound velocity method using a spherical resonator. 553
Deriving $S = k \ln \Omega$ (LTE). 730
Determination of the heat of sublimation of iodine. 551
Determination of the specific surface area of solids by means of adsorption data. 175

Polymer glass transition temperatures. 875
Potential energy surfaces. 395
Problem solving in physical chemistry using electronic spreadsheets (CS). 790
Radiationless relaxation and red wine. 995
Sorption hysteresis and the laws of thermodynamics. 209
Statistical determination of normal modes. 425
Student introduction to molecular vibrations. 756
Thermal analysis of decomposition of urea. 180
Thermochemistry, dilithium crystals, and Star Trek. 1039
Thermodynamics of "mixing" of ideal gases: A persistent pitfall (TF). 676
Thermodynamics of the rhodamine B lactone–zwitterion equilibrium: Undergraduate lab experiment. 362
Three-dimensional computer animation of a potential energy surface (CS). 495
Tin/lead solid/liquid phase diagram: Computer-controlled experiment (CS). 499
Tractable model for studying solution thermodynamics. 484
Two-parameter wave functions for the helium sequence. 128
Using a spreadsheet to calculate the fugacity of a van der Waals gas (CS). 137
Variable-angle X-ray photoelectron spectroscopic determination of the thickness of the oxide layer on aluminum metal. 981
Visualizing molecular weight averages and distributions. 488
Walther Nernst and the last law. 3
What is the physical significance of the pictures representing the Grotthus H^+ conductance mechanism (TF)? 777
Where is the link between quantum mechanical and thermodynamical adiabaticity? 311

Physical chemistry at USAFA: personalized instruction. **Larry P. Davis, Donn M. Storch,** and **Larry D. Strawser.** 784
Physical chemistry laboratory, Safety in the (SAFETY). **Janos Szamosi.** A164
Piccardi (1895–1972), Italian physical chemist and master of the sun, Giorgio (PROFILES). **George B. Kauffman** and **Lanfranco Belloni.** 205
Pictorial approach to teaching molecular motions in polyatomic molecules, A novel. **John G. Verkade.** 411
Plants, High-energy fuels and materials from. **Melvin Calvin.** 335
Plastic materials for insulating applications. **S. F. Wang** and **S. J. Grossman.** 39
Plasticizers in PVC: A combined IR and GC approach. **W. H. Chan.** 897
Plastics, Chemistry of. **Rudolph D. Deanin.** 45
Point group notation flow chart, Crystallographic symmetry. **G. L. Breneman.** 216
Poisoning: Each generation needs to be told, Mercury (ST). **Miriam C. Nagel.** 802
Polar maps in conformational analysis, Use of. **James P. Ounsworth** and **Larry Weller.** 568
Polarography of Cyanide in foodstuffs, Anodic. **T. J. Farrell, R. J. Laub,** and **E. P. Wadsworth, Jr.** 635
Polaroid films: A physical chemistry experiment, Atomic and molecular spectra using. **Manit Rappon** and **John M. Greer.** 453
Pollution, Demonstrating the chemistry of air (TD). **J. Leland Hollenberg, Edgar R. Stephens,** and **James N. Pitts, Jr.** 893
Polyatomic molecules, A novel pictorial approach to teaching molecular motions in. **John G. Verkade.** 411
Polyatomic thermochemical radii of general formula MX_n^{z-}, Approximation of spherical. **Hugo Solis–Correa** and **Jacobo Gomez–Lara.** 942

Polymer chemistry
Advances in rubber elasticity and characterization of elastomeric networks. 491
Chemistry of plastics. 45
Classroom demonstrations of polymer principles. 72, 886
Converting sunlight to mechanical energy: A polymer example of entropy. 889
Development of polymer chemistry as seen by Harman Mark. 858
Plastic materials for insulating applications. 39
Plasticizers in PVC using a IR and GC approach. 897
Polymer glass transition temperatures. 875
Polymer literature for classrooms. 47
Polymer properties and testing: Definitions. 866
Polymers in caulking and sealant materials. 861
Strethced elastomers. 42
Thermodynamics and the bounce. 43
Visualizing molecular weight averages and distributions. 488

Polymer nomenclature—or what's in a name? **Charles E. Carraher, Jr., George Hess,** and **L. H. Sperling.** 36
Polymer-supported oxidation reactions: Two contrasting experiments for the undergraduate laboratory. **Alan J. Buglass** and **John S. Waterhouse.** 371
Polymerization of norbornene and phenylacetylene, An undergraduate experiment in homogeneous catalysis: Synthesis of phenylethoxycarbene tungsten pentacarbonyl and. **Dider Villemin.** 183
Polymerizations: An organic and polymer laboratory experiment. Ring-opening and ring-forming. **Lon J. Mathias** and **Tito Viswanathan.** 639
Polymers, polymers, everywhere!: A workshop for pre-high school teachers and students. **Marie Sherman.** 868
Polymorphs, Allotropes and. **B. D. Sharma.** 404
Polynomial and π-energy levels of molecules using chemical graph theory, Facile calculations of the characteristic. **Jerry Ray Dias.** 213
Polystyrene: An experiment for undergraduate students, Expanded. **Alexandre Feigenbaum** and **Denise Scholler.** 810
Pop-and-sniff experimentation: A high-sensory-impact teaching device (CK). **Emeric Schultz.** 797
Postage stamp periodic table, A simple (STAMP). **Ll. Garrigos, F. Ferrando,** and **R. Miralles.** 682
Postage stamps: Dyes, phosphors, adhesives, Chemistry of (STAMP). **John B. Sharkey.** 195
Postage stamps, Teaching the concepts of metallurgy through the use of (STAMP). **Daniel Bartet P.** and **Eugenia Agulia G.** 526
Potassium permanganate solutions, The stability of. (F&R). **Thomas Rees.** 1058
Potential energy surfaces, A three-dimensional computer animation of a (CS). **Philip G. Butcher, Michael Mortimer,** and **Barrie G. Whatley.** 495
Potential energy surfaces. **C. E. Moore, Allan Banks,** and **H. H. Jaffe.** 395
Potentiometric sensors (LTE). **A. A. Woolf.** 384
Pourbaix diagram for cobalt, A laboratory exercise introducing students to the (F&R). **Dick Powell, Jim Cortez,** and **E. K. Mellon.** 165
Precision, Significance and (LTE). **A. V. Harkopf** and **H. S. Peiser.** 1068
Prelab sessions, Students preparation for (VIEW). **Judy Smith.** 621
Preparation and reaction of 2,2′-bipyridinetetracarbonylmolybdenum(0): An experiment in organometallic photochemistry. **David M. Manuta** and **Alistair J. Lees.** 637
Preparation of a Grignard reagent, An improved. **Timothy S. Eckert.** 179
Preparative exercises in general chemistry (GB). **George B. Kauffman.** 252
Pressure, On a relation between fugacity and (EQE). **Salem Jagannathan.** 677
Pressure on equilibria: A derivation of the van't Hoff rules, The effect of temperature and. **H. R. Kemp.** 482
Pressure reactions and processes run under an inert atmosphere, Versatile and inexpensive screw-cap vessels for medium. **Mikael Begtrup.** 974
Priestley, Preeminent amateur chemist, Joseph (PROFILES). **Foil A. Miller.** 745
Priorities in the high school curriculum (LTE). **William G. Lamb** and **John Liebermann.** 382
Problem solving, Generic and harder problems: Teaching (SYMP). **Catherine Middlecamp** and **Elizabeth Kean.** 516
Problem-solving in chemistry, The fostering of question-asking capability: A meaningful aspect of. **Uri Zoller.** 510
Problem solving in physical chemistry using electronic spreadsheets (CS). **Bhairav D. Joshi.** 790
Problem solving: Is there a difference?, Concept learning versus. **Susan C. Nurrenbern** and **Miles Pickering.** 508
Problem-solving laboratory exercises. **Harold Wilson.** 985
Problem solving, The name's the game in. **Janet N. Ryan.** 524
Problem solving, The role of algorithms in teaching (SYMP). **George M. Bodner.** 513
Problem solving, Using algorithms to teach (SYMP). **C. L. Schrader.** 518
Problem, The solution is not the (SYMP). **Julien Gendell.** 523
Problems without utilizing the factor-label approach, Solving chemistry (SYMP). **Frank Cardulla.** 519

Profiles in chemistry, edited by **Roger Festa**
Alexander Borodin: Full-time chemist, part-time musician. **Alvan D. White.** 326

Charles Martin Hall and the great aluminum revolution. **Vinay Kumar** and **Linda Milewski.** 690
Giorgio Piccardi (1895–1972), Italian physical chemist and master of the sun. **George B. Kauffman** and **Lanfranco Belloni.** 205

Stereochemistry, A quiz on (EQE). **Abhik Ghosh.** 1015
Stereochemistry: Choosing between likes and preferences, Nomenclature of relative. **Michael A. Brook.** 218
Stereoelectronic effects, tau bonds, and Cram's rule. **Claude E. Wintner.** 587
Stereographic images using Dreiding models and the Macintosh. **Michael J. Strauss** and **Gordon Gribble.** 850
Stereoisoerism as a result of free radical chlorination of a nonstereoisomeric substance (EQE). **John E. Fulkroad.** 533
Stoichiometry and suitable "coordinate systems", Reaction. **R. J. Tykodi.** 958
Stoichiometry for copper dissolution in nitric acid, New (LTE). **William D. Hill, Jr., F. M. El-Chelkh, S. A. Khalil, M. A. El-Manguch,** and **H. A. Qmar.** 1069
Stone monuments, Acid rain effects on (CHEM I). **A. Elena Charola.** 436
Stoppers almost uncontaminatable, Rendering. **Benjamin P. Ruekberg.** 724
Stratospheric ozone, Chlorofluorocarbons and. **Scott Elliott** and **F. S. Rowland.** 387.
Stretched elastomers: A case of decreasing length upon heating. **S. B. Clough.** 42
Structural theories applied to taste chemistry. **Tseng Kuang-chih** and **He Hua-zhong.** 1003
Structure of bis(trimethylsilyl) amides: A multinculear NMR project. **Marjorie S. Samples, Claude H. Yoder,** and **Charles D. Schaeffer, Jr.** 177
Structure prediction in color, Protein (CS). **Lawrence C. Davis** and **Gary A. Radke.** 582
Structure: Property relationships, Molecular. **Paul G. Seybold, Michael May,** and **Ujjvala A. Bagal.** 575
Structure refinement and electron density map: A computer programming experiment, X-ray (CS). **G. L. Breneman.** 790
Student strategies in a junior-level procedureless laboratory. **Warren S. Warren** and **Miles Pickering.** 68
Styrene by Br^3⁻: A laboratory experiment, Voltammetric monitoring of Br^- and Br^{3-} concentrations during the bromination of. **Annie Desbene-Monvernay, Jacques Berthelot,** and **Paul-Louis Desbene.** 86
Sublimation of iodine: A physical chemistry laboratory experiment, Determination of the heat of. **Richard W. Schwenz.** 551
Sulfate in acid rain, Convenient, low-cost method for determining (F&R). **Nicholas Johns** and **Stephen J. Longstaff.** 449
Summer science institute, UCI. **M. Taagepera, G. E. Miller,** and **A. J. Benesi.** 234
Sunlight to mechanical energy: A polymer example of entropy, Converting. **Lon J. Mathias.** 889
Superconductive material, Levitating a magnet using a. **Frederick H. Juergens, Arthus B. Ellis, Gunther H. Dieckmann,** and **Ronald I. Perkins.** 851
Superconductive powder, A simple demonstration of high T_c. **Roger Baker** and **James C. Thompson.** 853
Superconductivity in $TBa_2Cu_3O_{8-x}$, Preparation, iodometric analysis, and classroom demonstration of. **Daniel C. Harris, Marian E. Hills,** and **Terrell A. Hewston.** 847
Superconductivity, Three theories of. **F. A. Matsen.** 842
Superconductors: Better levitation through chemistry. **Arthur B. Ellis.** 836
Surface area of solids by means of adsorption data, Determination of the specific. **Rossella Brina** and **Achille De Battisti.** 175
Surface tension, Apparatus for measuring dynamic. **E. V. Srisankar, J. P. Shah,** and **K. S. Narayan.** 378
Sweeteners, A tale of two (TS). **Robert H. Goldsmith.** 954
Syllabus for a two-semester chemistry course for health professions: Report of the Committee on Chemical Education for the Health Professions. **John M. Daly** and **Jerry L. Sarquis.** 699
Symmetry in the solid state, Vibrational spectra of MnO_4^- isolated in KBr crystals: An illustration of pure T_d. **H. Hagemann, Y. Ravi Sekhar,** and **H. Bill.** 456

Symposium. Algorithms and problem solving. 513
Synthesis of an amino acid derivative and spectroscopic monitoring of dipeptide formation. **Richard J. Simmonds.** 966
Synthesis of aspartame, A convenient. **Gunnar Lindeberg.** 1062
Synthesis of chrysanthemic ester: An undergraduate experiment. **Lawrence F. Kelly.** 1061
Synthesis of DCl and HCl-^{36}Cl, Convenient. **Albert J. Fry.** 366
Synthesis program for allied health chemistry, Organic (CS). **Patrick Flash.** 238
Synthesis, Use of fluoromethanes in organic. **T. Stephen Everett.** 143

T

Tanabe–Sugano diagram, A widespread error in the d^8 (TF). **Anne L. Hormann** and **C. Frank Shaw III.** 918
Taste chemistry, Structural theories applied to. **Tseng Kuang-chih** and **He Hua-zhong.** 1003
Tau bonds, and Cram's rule, Stereoelectronic effects. **Claude E. Wintner.** 587

Teaching aids
An easily constructed model of twin cubes having a common line (or plane). 761
DNA model for every student. 806
Model of a coordination polyhedon that represents the cubic closest-packed structure. 1040
Model of a coordination polyhedron that represents the hexagonal closest-packed structure. 1033
Molecular vibration demonstrations. 1025
Mounting stereo slides properly. 1041
Polymer literature for classrooms. 47
Stereographic images using Dreiding models and the Macintosh. 850
Two working models for the S_N2 mechanism. 1023

Teaching techniques
A novel pictorial approach to teaching molecular motions in polyatomic molecules. 411
Analytical methods development. 528
Annotating reaction equations (CP). 243
Avogadro's number through a water drop calculation (INS). 611
Carbon dioxide: Its principal properties displayed and discussed (BR). 167
Charles's Law: Students develop their own procedure (F&R). 712
Chemistry for fifth and sixth graders: From plastic laundry basket "labs". 714
Computer programming in general chemistry (CS). 584
Concept learning versus problem solving. 508
Critical-thinking writing assignments in general chemistry 506
Crystallographic symmetry point group notation flow chart. 216
Data sheets: An instructional aid. 525
Drawing enantiomers the easy way. 1042
Easy demonstration of visible spectrum using the Spectronic 20 (F&R). 627
Election results and reactions yields (AA). 248
Electron spectroscopic methods in teaching. 418
Electronegativity: A mnemonic rule. 941
Example of a constant-rate reaction (F&R). 534
Fostering question-asking capability as a way to problem solving. 510
Free fall and fire: An introduction to physical thought (BR). 1047
General approach for teaching hydrolysis of salts. 957
Generic and harder problems: Teaching problem solving (SYMP). 516
Ground state electronic structure for atoms and monatomic ions. 943
Hands-on versus computer simulation methods in chemistry. 232
Hard and easy ways to teach limiting reagent and mixing problems (INS). 698
Intermediate counting unit for teaching the mole (INS). 956
Making sense of the nomenclature of the oxyacids and their salts (INS). 409
Method for determining R and S for Fischer projections. 1034
Modified Piagetian theory applied to teaching. 502
Molecular vibration demonstrations. 1025
New method to balance chemical equations (INS). 247
New road to reactions. 692, 1010
New way to introduce concept of elements and atoms. 1010
Next time . . . I hope (LTE). 558
Nuts and bolts approach to explain limiting reagents. 134
Parallels between adolescents' conception of gases and the history of chemistry. 616
Periodic table subgroups designations. 9
Permission (LTE). 903
Postage stamp periodic table (STAMP). 682
Problem-solving laboratory exercises. 985
Proper use of the quadratic equation (TF). 1009
Reaction stoichiometry and suitable "coordinate systems". 958
Requiring good writing in chemistry courses. 505
Role of algorithms in teaching problem solving (SYMP). 513
Searching *Chemical Abstracts Online* in undergraduate chemistry. 55
Semantic–linquistic method of solving verbal problems. 49
Should students always use algorithms to solve problems (SYMP)? 514
Sociology and Pauli's aufbau rules. 27
Solving chemistry problems without utilizing the factor-label approach. 519
Student preparation for prelab sessions (VIEW). 621
Teaching students to expect the unexpected (INS). 155
Teaching the concepts of metallurgy through the use of postage stamps (STAMP). 526
The name's the game in problem solving. 524
The solution is not the problem (SYMP). 523
The structure of the water molecule: What should we tell the students? 124
Thermochemistry, dilithium crystals, and Star Trek. 1039
Two working models for the S_N2 mechanism. 1023
Two-dimensional working model of the neon electron configuration. 133
Understanding the particulate nature of matter. 695
Use of commercial spreadsheet programs in the science laboratory (CS). 31
Using a Sherlock Holmes story to teach organic concepts. 1014
Using algorithms to teach problem solving (SYMP). 518
Using electronic laboratory notebook software in the instrumental analysis course (CS). 29
Using NASA and the space program to help high school and college students learn chemistry. 60, 228
Using sand and iron filings to teach concepts of mixtures (AA). 154
Visualizing molecular weight averages and distributions. 488
Werner and Jorgensen: Presenting history with a computer (CS). 688
What goes on in students' head in lab (SYMP)? 521

Technologists, Safety course for chemical (SAFETY). **Kathleen A. Simpson.** A6
Temperature and pressure on equilibria: A derivation of the van't Hoff rules, The effect of. **H. R. Kemp.** 482
Temperature controller, Simple, low-cost programmer for a (IC). **H. R. Alzabet** and **J. A. Barbero.** 380
Template and font for drawing molecular structures with the Macintosh computer, ChemPlate and Hopkins (CS). **Jih Ru Hwu, John M. Wetzel,** and **Jeffrey A. Robl.** 135

Tested demonstrations, edited by **George L. Gilbert**
A Charles's law/vapor pressure apparatus. **Phillip K. Hall.** 959
A convenient demonstration of combustion and explosion. **Ariel E. Fenster, David N. Harpp,** and **Joseph A. Schwarcz.** 984
A multicolored luminol-based chemiluminescence demonstration. **John H. Chalmers, Jr., Michael W. Bradbury,** and **Jill D. Fabricant.** 969
A spectacular demonstration: $2H_2 + O_2 \rightarrow 2H_2O$. **James F. Skinner.** 545
A versatile demonstration with calcium carbide. **Ariel A. Fenster, David N. Harpp,** and **Joseph A. Schwarcz.** 444
An easily demonstrated photosensitive system. **David O. Cooke.** 257
Control of variables and the conservation of matter. **Gary G. Giachino.** 353
Coupled oscillations. **D. P. Onwood.** 351
Demonstrating the chemistry of air pollution. **J. Leland Hollenberg, Edgar R. Stephens,** and **James N. Pitts, Jr.** 893
Demonstration of condensation–vaporization. **Rex D. Ackerson.** 70
Demonstration of the pH changes during the electrolysis of water. **A. Habich** and **H. R. Hausermann.** 171
Demonstration of vapor pressure. **W. S. Richardson.** 968
Fractal structures obtained by electrodeposition of silver at an air–water interface. **Woodfin V. Ligon, Jr.** 1053
Inorganic fireflies: A chemiluminescent clock reaction. **Peter Jones, Jane E. Frew,** and **Nina Scowen.** 70
Iron(II) oxide. **Clifford D. Miller.** 545
Methane pistol. **James F. Skinner.** 171
Modifications of some traditional demonstrations with liquids (TD). **Brian Stedjee.** 984
Musical molecular weights revisited. **Frederick B. Augustine.** 1053
Redox demonstrations and descriptivechemistry. **Charles E. Ophardt.** 716
Part 1. Metals. 716
Part 2. Halogens. 807
The arsenic(III) sulfide clock reaction. **Kenneth W. Watkins.** 255
The cola clock: A new flavor to an old classic. **Richard A. Russell** and **Robert W. Switzer.** 445
The induction by iron(II) of the oxidation of iodide by dichromate. **William L. Jolly.** 444
The stepwise reduction of permanganate in alkaline conditions: A lecture demonstration. **Peter Ruoff.** 624
Thioxanthone sulfone radical anion: A relatively stable ketyl. **Jose Castrillon.** 352
Which will evaporate first? **Allan Stenmark.** 351

Testing: Definitions, Polymer properties and. **Charles E. Carraher, Jr.** and **Raymond B.Seymour.** 866

Textbook forum, edited by **Ralph Birdwhistell**
A widespread error in the d^6 Tanabe–Sugano diagram. **Anne L. Hormann** and **C. Frank Shaw III.** 918
Good numerical technique in chemistry: The quadratic equation. **H. Bradford Thompson.** 1009
On a common graphical flaw in the carboxylic acid/alcohol relative acidity argument. **Ronald W. McClard.** 416
Outmoded terminology: The normal hydrogen electrode. **R. W. Ramette.** 885
The misuse of Markownikov's rule. **Thomas A. Newton.** 531
The transition state. 208
Thermodynamics of "mixing" of ideal gases: A persistent pitfall. **Edwin F. Meyer.** 676
Tollens's test, fulminating silver, and silver fulminate. **Ian D. Jenkins.** 164
What is the physical significance of the pictures representing the Grotthus H^+ conductance mechanism? **H. G. Hertz, B. M. Braun, K. J. Muller,** and **R. Maurer.** 777

Theoretical chemistry
A good example of the Franck–Condon principle. 427
A novel pictorial approach to teaching molecular motions in polyatomic molecules. 411
Ab initio calculations on a microcomputer (CS). 789
Diatomic vibrations revisited. 753
Exercises in quantum mechanics (CS). 789
Facile calculations of the characteristic polynomial and π-energy levels of molecules using chemical graph theory. 213
Finding the terms of configurations of equivalent electrons by partitioning total spins. 771
FTIR rotational spectroscopy. 921
Heisenberg uncertainty principle: An application to the shell structure of atoms and orbit descriptions of molecules (LTE). 1070
Iodine spectrum revisited. 919
Numerical algorithm technique for deriving Russell–Saunders (R–S) terms. 951
Particle in an equilateral triangle: Exact solution of a nonseparable problem. 130
Potential energy surfaces. 395
Statistical determination of normal modes. 425
Student introduction to molecular vibrations. 756
Superconductors. 836
Three theories of superconductivity. 842
Two-parameter wave functions for the helium sequence. 128
Use of Pascal-like triangles in describing first-order NMR coupling patterns. 315
Using a spreadsheet to calculate the fugacity of a van der Waals gas (CS). 137
What is the physical significance of the pictures representing the Grotthus H^+ conductance mechanism (TF)? 777
Where is the link between quantum mechanical and thermodynamical adiabaticity? 311

Theoretical?, Descriptive chemistry versus (PO). **Benjamin P. Huddle.** 765
Theoretical spectrum simulation, Experimental verification of a Boltzmann distribution: An experiment in spectroscopy and. **Mark Sulkes** and **Jean E. Osburn.** 720
Thermal analysis experiment, The thermal decomposition of urea: An undergraduate. **Alfred M. Wynne.** 180
Thermite reaction variation, Hazard in (LTE). **Arthur Moss.** 257
Thermochemical radii of general formula MX_n^{z-}, Approximation of spherical polyatomic. **Hugo Solis–Correa** and **Jacubo Gomez–Lara.** 942
Thermochemistry, dilithium crystals, and Star Trek. **Reggie L. Hudson.** 1039
Thermodynamical adiabaticity?, Where is the link between quantum mechanical and. **B. Boulil, M. Deumie,** and **O. Henri–Rousseau.** 311

Thermodynamics
Chemists' delta (PO). 668
Comments on partial derivatives in thermodynamics. 670
Deriving $S = k \ln \Omega$ (LTE). 730
Entropy criterion for equilibrium (LTE). 470
Entropy of dissolution of urea. 723
General definitions of work and heat in thermodynamic processes. 660
Heat of vaporization of nitrogen. 1060
Hysteresis in metal hydrides. 944
Introducing the Pourbaix diagram for cobalt (F&R). 165
Mnemonic diagrams for thermodynamic systems. 674
On a relation between fugacity and pressure (EQE). 677
On the minimum of the Gibbs free energy involved in chemical equilibrium: Some further comments on the stability of the system. 201
Sorption hysteresis and the laws of thermodynamics. 209
Thermodynamics of the rhodamine B lactone–zwitterion equilibrium. 362
Thermodynamics of "mixing" of ideal gases: A persistent pitfall (TF). 676
Tractable model for studying solution thermodynamics. 484
Walther Nernst and the last law. 3

Thermodynamics and the bounce. **Charles E. Carraher, Jr.** 43
Thermometer for cryoscopic and calorimeter measurements and lecture demonstrations, An inexpensive linear thermistor (CS). **James W. Beatty** and **Todd B. Colin.** 500
Thin-layer chromatography, Analysis of aspartame and its hydrolysis products by. **Alfred R. Conklin.** 1065
Thin-layer chromatography in the analysis of organic compounds: Determining the molecular weights of 2,4-dinitrophenylhydrazones and dicarboxylic acids, Quantitative application of (GB). **Vincenzo Giuliano** and **John Paul Rieck.** 625
Thioacetamide a serious health hazard in inorganic chemistry laboratories, Is (SAFETY). **Hannu Elo.** A144
Thioxanthone sulfone radical anion: A relatively stable ketyl (TD). **Jose Castrillon.** 352
Three theories of superconductivity. **F. A. Matsen.** 842

Thumbnail sketches, edited by **Mary Virginia Orna, O.S.U.**
A tale of two sweeteners. **Robert H. Goldsmith.** 954
Crude iodine production processes. **Phyllis A. Lyday.** 152
The official rules for organic chemical nomenclature: Emergence, evolution, emphases, and errors. **James G. Traynham.** 325
Tissue paper, Infrared analysis using. **Noel L. Owen** and **Steven G. Wood.** 976
Titration experiment with laser excitation and computer-interfaced endpoint detection, A colorimetric (CS). **Manish A. Mehta** and **Richard F. Dallinger.** 1019
Titrations, Quaternary ammonium halides: Versatile reagents for precipitation (GB). **Walter S. Selig.** 141
Titrimetric data, An alternative use of (LTE). **Ca4los Castillo S.** 288
TLC, Separation and identificationof cinnamic acids by. **Florinda O. Bobbio, Paulo A. Bobbio,** and **Sandra C. de Souza.** 182
Tollens's test, fulminating silver, and silver fulminate (TF). **Ian D. Jenkins.** 164

Topics in chemical instrumentation, edited by **Frank A. Settle, Jr.**
Approaches to voltammetric and chromatographic monitoring of neurochemicals in vivo. **Alice J. Cunningham** and **Joseph B. Justice, Jr.** A34

Computer interfacing to laboratory instruments: How to minimize noise interferences. **Mary Karpinski.** A100
Fourier transform infrared spectroscopy. **W. D. Perkins**
Part II. Advantages of FT-IR. A269
Part III. Applications. A296
Fourier transforms for chemists. **L. Glasser**
Part I. Introduction to the Fourier transform. A228
Part II. Fourier transforms in chemistry and spectroscopy. A260
Part III. Fourier transforms in data treatment. A306
X-ray fluorescence spectrometric analysis of geologic materials. **John A. Anzelmo** and **James R. Lindsay.** A181
Part 1. Principles and instrumentation. A181
Part 2. Applications. A200
Transition state (TF). 208
Trypsinogen by trypsin, Autocatalytic activation of. **Salvatore F. Russo** and **Erin T. Wahl.** 83
Tupperware seals and polyethylene coffee can lids, Inexpensive low-frequency IR windows using. **Vinita C. Dew.** 975
Two fundamental constants. **Ian J. Mcnaught** and **Gavin D. Peckham.** 999
Two-parameter wave functions for the helium sequence. **Wai-Kee Li.** 128

U

UCI summer science institute. **M. Tasgepera, G. E. Miller,** and **A. J. Benesi.** 234
Ultraviolet emission of a helium discharge source studied by photoelectron spectroscopy, The far. **J. Barrie Peel** and **Ellak I. von Nagy-Felsobuki.** 463
Unbalanced chemical equations (LTE). **William B. Jensen.** 646
Undergraduate research: An update, Status of. **Claude H. Yoder** and **James N. Spencer.** 163
Understanding the particulate nature of matter. **Dorothy L. Gabel, K. V. Samuel,** and **Diana Hunn.** 695
Units, Fundamental and descriptive (LTE). **H. R. Kemp.** 191
Upgrading laboratory fume hoods (SAFETY). **G. Thomas Saunders.** A272
Upward view of the periodic table: Getting to the bottom of it. **William B. Guenther.** 9
Urea: An undergraduate thermal analysis experiment, The thermal decomposition of. **Alfred M. Wynne.** 180
Urea, The entropy of dissolution of. **Miles Pickering.** 723
Using chemistry's crystal ball (VIEW). **Bill Allen.** 227
Utilizing a historical perspective in the teaching of chemistry (GOALS). **Joseph W. Kamsar.** 931

V

van't Hoff, J. H. (PROFILES). **W. A. E. McBryde.** 573
van't Hoff rules, The effect of temperature and pressure on equilibria: A derivation of the. **H. R. Kemp.** 482
Vapor pressure apparatus, A Charles's law (TD). **Phillip K. Hall.** 969
Vapor pressure, Demonstrations of (TD). **W. S. Richardson.** 968
Vessels for medium pressure reactions and processes run under an inert atmosphere, Versatile and inexpensive screw-cap. **Mikael Begtrup.** 974
Vibration demonstrations, Molecular. **George Turrell** and **Robert Demol.** 1025
Vibrational spectra of MnO^{4-} isolated in KBr crystals: An illustration of pure T_d symmetry in the solid state. **H. Hagemann, Y. Ravi Sekhar,** and **H. Bill.** 456
Vibrations, A student introduction to molecular. **Anthony R. Lacey.** 756
Vibrations revisited, Diatomic. **P. L. Goodfriend.** 753
Videotaped experiment, Kinetics and mechanism of the iodine–azide reaction. **Gilbert P. Haight** and **Loretta L. Jones.** 271

View from my classroom, edited by **Claire Smith**
Science fair projects: Some guidelines for better science. **David Pushkin.** 962
Student preparation for prelab sessions. **Judy Smith.** 621
Using chemistry's crystal ball. **Bill Allen.** 227
Fisible spectrum using the Spectronic 20, Easy demonstration of the (F&R). **Marie Sherman.** 627
Vitamin C by high-pressure liquid chrmatography. Analysis of. **David E. Goodney.** 187
Voltage of an ion-selective electrode, Estimating the equilibrium. **On-Kok Chang.** 91
Voltammetric and chromatographic monitoring of neurochemicals in vivo, Approaches to (TICI). **Alice J. Cunningham** and **Joseph B. Justice, Jr.** A34
Voltammetric monitoring of Br^- and Br^{3-} concentrations during the bromination of styrene by Br^{3-}: A laboratory experiment. **Annie Desbene-Monvernay, Jacques Berthelot,** and **Paul-Louis Desbene.** 86
Voltammetry experiment using a mercury electrode, A cyclic. **Enrique Brillas, Jose A. Garrido, Rosa M. Rodriguez,** and **Javier Domenech.** 189
Volumetric glassware, Oven drying of. **David R. Burfield** and **Glenn Hefter.** 1054
Vortex tube, Laboratory applications of the. **Thomas J. Bruno.** 987

W

Wartime research on RDX (CHS). **John T. Edward.** 599
Waste operations in laboratories, Self audits of Hazardous (SAFETY). **Kenneth E. Fischer.** A207
Wastes in academic labs, Chemical (SAFETY). **Wendy A. Walton.** A69
Water, Correct equilibrium constants for (LTE). **George Baldwin** and **C. Eugene Burchill.** 1067
Water: The structure of the water molecule, What should we tell the students?, No rabbit ears on. **Michael Laing.** 124
Wave functions for the helium sequence, Two-parameter. **Wai-Kee Li.** 128
Waves, Luther's 1906 discovery and analysis of chemical waves. **Kenneth Showalter** and **John J. Tyson.** 742
Werner and Jorgensen: Presenting history with a computer (CS). **David M. Whisnant.** 688
Werner's overlooked opportunity, The spontaneous resolution of *cis*-bis(ethylenediamine)dinitrocobalt(III) salts: Alfred. **Ivan Bernal** and **George B. Kauffman.** 604
What goes on in students' heads in lab (SYMP)? **Miles Pickering.** 521
Whiskey using internal standard techniques: A GC experiment for quantitative analysis, Determination of impurities. **Gary W. Rice.** 1055
Who is teaching the history of chemistry? **Kenneth G. Everett** and **Will S. DeLoach.** 991
Wine, Radiationless relaxation and red. **Hugh D. Burrows** and **A. Correia Cardoso.** 995
Women and the PhD (LTE). **Agnes Tenney.** 288
Women, Chemistry's creative. **Nina Matheny Roscher.** 748
Women chemists in the 20th century: Past, present, projections, Academic. **Nine Matheny Roscher** and **Margaret A. Cavanaugh.** 823
Word usage in analytical chemistry, Questionable. **M. G. Mellon.** 735
Work and heat in thermodynamic processes, General definitions of. **Eric A. Gislason** and **Norman C. Craig.** 660
Wrinch and the structure of proteins, Dorothy (LTE). **Linus Pauling.** 286
Wrinch and the structure of proteins, Dorothy (LTE). **R. Bruce Martin.** 1069
Writing across the curriculum: Chemistry lab reports. **Lois C. Rosenthal.** 996
Writing assignments in general chemistry, Critical-thinking. **Naola VanOrden.** 506
Writing in chemistry courses, Requiring good. **Estelle K. Meislich.** 505

X

Xenobiotic chemicals, Metabolism of. **John W. Cullen.** 396
Xylene mistures using binculear lanthanide(III)–silver(I) NMR shift reagents, Analysis of. **Thomas J. Wenzel** and **Mark D. Russett.** 979
X-ray fluorescence spectrometric analysis of geologic materials (TICI). **John A. Anzelmo** and **James R. Lindsay.**
Part I. Principles and instrumentation. A181
Part II. Applications (TICI). A200
X-0ray photoelectron spectroscopic determination of the thickness of the oxide layer on aluminum metal: An advanced undergraduate laboratory experiment, Variable-angle. **David E. King** and **W. E. Swartz, Jr.** 981
X-ray structure refinement and electron density map: A computer programming experiment (CS). **G. L. Breneman.** 790.

Z

Zwitterion equilibrium: An undergraduate laboratory experiment, Thermodynamics of the rhodamine B lactone. **Daniel A. Hinckley** and **Paul G. Seybold.** 362

Titles

Amino acids, Asymmetric synthesis: Construction of chiral molecules using. **Gary M. Coopola and Herbert F. Schuster.** A248

Analysis, Quantitative chemical. **Daniel C. Harris.** A156

Analysis, Quantitative chemical. **Stanley E. Manahan.** A328

Animator, The molecular. **J. Jeffrey Howbert.** A286

Asymmetric synthesis: Construction of chiral molecules using amino acids. **Gary M. Coopola and Herbert F. Schuster.** A248

Basic concepts of chemistry, Computerized version, Second Edition. **Leo J. Malone.** A219

Bergman: A man before his time, Torbern. **J. A. Schufle.** A58

Biological chemistry, General, organic and. **Drew H. Wolfe.** A156

Biological chemistry, Study guide and solutions manual, General, organic, &. **Dorothy M. Feigl and John W. Hill.** A327

Blackboard, Computer-assisted. **L. J. Soltzberg.** A135

Carcinogenic chemicals, Information and disposal guide, Potentially. **M. A. Armour, R. A. Bacovsky, L. M. Browne, P. A. McKenzie, and D. M. Renecker.** A328

Central science, third edition, chemistry, the. **Theodore L. Brown and Eugene Lemay, Jr.** A173

Chem lab simulations 1: Titrations, and chem lab simulations 2: Ideal gas law. **John Gelder.** A57

Chemical elements. **Paul Fleisher.** A25

Chemical reactivity, Chemistry and. **John C. Kotz and Keith F. Purcell.** A219

Chemistry trivia: Book 1. History. **Sylvia Tascher and James D. Navratil.** A156

Chemistry, the central science, third edition. **Theodore L. Brown and Eugene Lemay, Jr.** A173

Chemist's English, The. **Robert Schoenfeld.** A173

Chiral molecules using amino acids, Asymmetric synthesis: Construction of. **Gary M. Coopola and Herbert F. Schuster.** A248

Comet Halley: Once in a lifetime. **Mark Littman and Donald K. Yeomans.** A192

Computerized version, Second edition, Basic concepts of chemistry. **Leo J. Malone.** A219

Computer-assisted blackboard. **L. J. Soltzberg.** A135

Coordination chemistry. **F. Basolo and R. C. Johnson.** A191

Data bases for pfs: File, Scholastic pfs: File and physical. **R. McLeod and B. Hunter.** A248

Disposal guide, Potentially carcinogenic chemicals, Information and. **M. A. Armour, R. A. Bacovsky, L. M. Browne, P. A. McKenzie, and D. M. Renecker.** A328

Elements, Chemical. **Paul Fleisher.** A25

Elements, Science volume 4: Physics/chemistry chemical. A26

English, The chemist's. **Robert Schoenfeld.** A173

ENZPACK. **P. A. Williams.** A326

Essays on the history of organic chemistry in the United States, 1875–1955. **Dean Stanley Tarbell and Tracy Ann Tarbell.** A287

Formulas, Writing chemical. **Don Ross.** A88

Games scientists play, Winning the. **Carl J. Sindermann.** A91

Gas law, Chem lab simulations 1: Titrations, and chem lab simulations 2. **John Gelder.** A57

General, organic & biological chemistry, Study guide and solutions manual. **Dorothy M. Feigl and John W. Hill.** A327

General, organic, and biological chemistry. **Drew H. Wolfe.** A156

Halley: Once in a lifetime, Comet. **Mark Littman and Donald K. Yeomans.** A192

History and preservation of chemical instrumentation, The. **John T. Stock.** A27

History of organic chemistry in the United States, 1875–1955, Essays on. **Dean Stanley Tarbell and Tracy Ann Tarbell.** A287

History, Chemistry trivia: Book 1. History. **Sylvia Tascher and James D. Navratil.** A156

Instrumentation, The history and preservation of chemical. **John T. Stock.** A27

Microscale organic laboratory. **D. W. Mayo, R. M. Pike, and S. S. Butcher.** A191

Molecular animator, The. **J. Jeffrey Howbert.** A286

Organic chemistry in the United States, 1875–1955, Essays on the history of. **Dean Stanley Tarbell and Tracy Ann Tarbell.** A287

Organic chemistry, third edition. **Ralph Fessenden and J. Fessenden.** A287

Organic laboratory, Microscale. **D. W. Mayo, R. M. Pike, and S. S. Butcher.** A191

Organic stereochemistry. **J. Philip Bays.** A116

Organic & biological chemistry, Study guide and solutions manual, General. **Dorothy M. Feigl and John W. Hill.** A327

Organic, and biological chemistry, General. **Drew H. Wolfe.** A156

Principles of colloid and surface chemistry, second edition. **P. C. Himenz.** A328

Quantitative chemical analysis. **Daniel C. Harris.** A156

Quantitative chemical analysis. **Stanley E. Manahan.** A328

Scholastic pfs: File and physical science data bases for pfs: File. **R. McLeod and B. Hunter.** A248

Science volume 4: Physics/chemistry chemical elements. A26

Scientists play, Winning the games. **Carl J. Sindermann.** A91

Stereochemistry, Organic. **J. Philip Bays.** A116

Study guide and solutions manual, General, organic & biological chemistry. **Dorothy M. Feigl and John W. Hill.** A327

Symmetry through the eyes of a chemist. **Istvan Hargittai and Magdolna Hargittai.** A249

Synthesis: Construction of chiral molecules using amino acids, Asymmetric. **Gary M. Coopola and Herbert F. Schuster.** A248

Titrations, and chem lab simulations 2: Ideal gas law, Chem lab simulations 1. **John Gelder.** A57

Trivia: Book 1. History, Chemistry. **Sylvia Tascher and James D. Navratil.** A156

Winning the games scientists play. **Carl J. Sindermann.** A91

Writing chemical formulas. **Don Ross.** A88
